

Anabolic Steroid Cypionate Testosterone Powder For Muscle Building 58-20-8

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Testosterone
- Minimum Order Quantity: 1KG
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25KG/Febr Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Product: Testosterone Cypionate
- Cas No.: 58-20-8
- Molecular Weight: 412.60
- Molecular Formula: C₂₇H₄₀O₃
- Fineness: 99%MIN
- Apperance: White Powder
- Shelf Life: 2 Years
- Highlight: **Anabolic Steroid Cypionate Testosterone Powder**
, **Muscle Building Cypionate Testosterone Powder**
, **58-20-8 Cypionate Testosterone Powder**

Product Description

Anabolic Steroid Testosterone Cypionate Powder for Muscle Building 58-20-8

Basic Information form Of Testosterone Cypionate:

Product Name	Testosterone Cypionate
Cas No.	58-20-8
Purity	99%
Appearance	white powder
MF	C ₂₇ H ₄₀ O ₃
MW	412.60
Shelf life	2 years

What Is Testosterone Cypionate:

Testosterone Cypionate is the longest-estered testosterone available today. It has a half-life in the body of 15 to 16 days and is found as injectable oil. Because it reacts in the body for so long, it can cause more water retention than other steroids and is best used as bulking compound in a stack. Endogenous androgens are responsible for normal growth and development of the male sex organs and for maintenance of secondary sex characteristics. These effects include growth and maturation of the prostate, seminal vesicles, penis, and scrotum; development of male hair distribution, such as beard, pubic, chest, and axillary hair; laryngeal enlargement, vocal cord thickening, and alterations in body musculature and fat distribution. Drugs in this class also cause retention of nitrogen, sodium, potassium, and phosphorous, and decreased urinary excretion of calcium. Androgens have been reported to increase protein anabolism and decrease protein catabolism. Nitrogen balance is improved only when there is sufficient intake of calories and protein.

How does Testosterone Cypionate Build Muscle ?

Testosterone Cypionate is a highly anabolic and androgenic hormone making it a great steroid to use if one is in pursuit of more size and strength. Testosterone Cypionate promotes nitrogen retention in the muscle and the more nitrogen the muscles hold the more protein the muscles store. Testosterone Cypionate can also increase the levels of another anabolic hormone, IGF-1 in muscle tissue providing even more anabolic activity. Testosterone Cypionate also has the amazing ability to increase the activity of satellite cells. These cells play an active role in repairing damaged muscle. Testosterone also binds to the androgen receptor to promote androgen receptor dependent mechanisms for muscle gain and fat loss.
