

Anabolic Steroid Prop 100 Testosterone For Gains Cutting Cycle

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Testosterone
- Minimum Order Quantity: 1KG
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25KG/Febr Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Product: Testosterone Propionate
- Molecular Formula: C₂₂H₃₂O₃
- Molecular Weight: 344.49
- Cas No.: 57-85-2
- Fineness: 99%
- Apperance: White Powder
- Shelf Life: 2 Years
- Highlight: **Anabolic Steroid Prop 100 Testosterone, Gains Cutting Prop 100 Testosterone, Gains Cutting testo prop 100**

Product Description

Testosterone Anabolic Steroid Testosterone Propionate For Gains Cutting Cycle

Basic Information form Of Testosterone Propionate:

Product Name	Testosterone Propionate
Cas No.	57-85-2
Purity	>99%
Appearance	white powder
MF	C ₂₂ H ₃₂ O ₃
MW	344.49
Shelf life	2 years

What Is Testosterone Propionate:

Testosterone Propionate is one of the oldest testosterone compounds to ever exist; in-fact, propionate was the first testosterone compound made available on the U.S. market. A rather fast acting testosterone compound, Propionate is comprised of the same testosterone hormone that makes up Testosterone Cypionate, Enanthate and all other forms. The only difference in this form is the Propionate ester as it is removed from the hormone faster than the other forms causing the testosterone to become active faster.

Testosterone propionate like Testosterone Cypionate and enanthate is a widely used steroid by many bodybuilders. The major difference between testosterone propionate and other formulations is the onset and duration of response.

In essence, testosterone is much faster acting and is released from the injected site within 3-4 days. Once absorbed into the blood stream it remains for 24-48 hours. This shorter duration of action compared to the other testosterone formulations also results in lesser side effects.

Testosterone Propionate is the shortest-estered testosterone steroid. It's an injectable compound with a slower rate of release than un-esterified Testosterone, but a faster rate of release than all the rest of esterified testosterone. There are some advantages and disadvantages to the short acting ester. The major disadvantage is that users have to inject Testosterone Propionate at minimum every other day throughout the cycle to get proper results. The advantages, however, are easier control and prevention of potential side effects. Also because there is less ester per vial, there is more actual testosterone per injection, which produces better results. The Propionate ester expands Testosterone's half-life to about 4 and a half days.

Usage Of Testosterone Propionate:

Testosterone Propionate is one of the most popular anabolic steroids even today - 80 years after it's invention. It is widely used by bodybuilders and athletes for the purpose of physique and performance enhancement. Testosterone itself is considered the most natural and safest anabolic steroid a person can use. The Propionate ester is suggested for any first time steroid user.

Testosterone propionate has been used for studying its effects on pregnant ewes. Testosterone Propionate is the shortest commonly ester attached to the Testosterone hormone. This means it takes your body the least amount of time to rid itself of the ester and release the parent hormone into the body.

Testosterone Propionate is used in men who do not make enough of a natural substance called testosterone. In males, testosterone is responsible for many normal functions, including growth and development of the genitals, muscles, and bones. It also helps cause normal sexual development (puberty) in boys. Testosterone belongs to a class of drugs known as androgens. It works by affecting many body systems so that the body can develop and function normally.

Testosterone may also be used in certain adolescent boys to cause puberty in those with delayed puberty. It may also be used to treat certain types of breast cancer in women.

Package and Shipping Of Testosterone Propionate:

Under 25kg: inner: A PE bag in aluminum foil bag; Outside: carton

Over 25kg: inner: Double PE bags; Outside: 25kg/ fibre drum

Shipping:

With 3-5 days after your payment

FAQ Of Testosterone Propionate:

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is 1kg.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment.

Q3: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer a better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
