

Anabolic Steroid Testosterone Propionate For Bodybuilding And Sex Enhancement

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Testosterone
- Minimum Order Quantity: 1KG
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25KG/Febr Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Product: Testosterone Propionate
- MF: $C_{22}H_{32}O_3$
- MW: 344.49
- Cas No.: 57-85-2
- Purity: 99.6%
- Aspect: White Powder
- Shelf Life: 2 Years
- Highlight: **Anabolic Steroid Testosterone Propionate, Testosterone Propionate For Bodybuilding, Testosterone Propionate Sex Enhancement**

Product Description

Testosterone Anabolic Steroid Propionate for Bodybuilding and Sex Enhancement

Basic Information form Of Testosterone Propionate:

Product Name	Testosterone Propionate
Synonyms	Test PRO; Testosterone propionate; Agovirin; Test prop
Cas No.	57-85-2
Molecular Formula	C ₂₂ H ₃₂ O ₃
Molecular Weight	344.49
Purity	99.6%
Appearance	white powder
Shelf life	2 years

Description Of Testosterone Propionate:

Testosterone Propionate is the shortest-estered testosterone steroid. It's an injectable compound with a slower rate of release than un-esterified Testosterone, but a faster rate of release than all the rest of esterified testosterone. There are some advantages and disadvantages to the short acting ester. The major disadvantage is that users have to inject Testosterone Propionate at minimum every other day throughout the cycle to get proper results. The advantages, however, are easier control and prevention of potential side effects. Also because there is less ester per vial, there is more actual testosterone per injection, which produces better results. The Propionate ester expands Testosterone's half-life to about 4 and a half days.

Testosterone Propionate is simply Testosterone with the Propionate ester bound to its chemical structure. The 'Propionate' is Propionic acid, but once bound to Testosterone it is known as an ester bond (or ester linkage). Propionic acid is bonded to the 17-beta hydroxyl group on the Testosterone structure. Esterified anabolic steroids are more fat soluble, and release slowly from the injection site. The main reason for the increased half-life and release rate is because once Testosterone Propionate enters the bloodstream, enzymes work to break the bond between the ester and the testosterone, which takes a varying amount of time - depending on which ester is used. In the end enzymes remove the ester, and what is left is pure Testosterone which is free to do its work in the body. Testosterone alone with no ester bonded to it has a half-life of approximately 2 to 4 hours. When the Propionate ester is bonded to it, the half-life of Testosterone extends to about 4 and a half days.

Testosterone promotes nitrogen retention in the muscle - the more nitrogen the muscle holds the more protein it can store, and the bigger it gets. Testosterone also increases the body's IGF-1 levels. IGF-1's principal role is to coordinate growth and metabolism. IGF-1 is highly dependent on growth hormone to complement its growth promoting activity.

Dosage Of Testosterone propionate:

The most common dosage schedule for this compound (men) is to inject 50 to 100mg, every day or 2nd day. As with the more popular esters, the total weekly dosage would be in the range of 300-700mg. As with all testosterone compounds, this drug is most appropriately suited for bulking phases of training. Here it is most often combined with other strong agents such as Dianabol, Anadrol, or Deca-Durabolin, combinations that prove to work quite well. Propionate however is sometimes also used with nonaromatizing anabolics/androgens during cutting or dieting phases of training, a time when its fast action and androgenic nature are also appreciated. Popular stacks include a moderate dosage of propionate with an oral anabolic like Winstrol (15-35 mg daily), Primobolan (50-150mg daily) or oxandrolone (15-30mg daily). Provided the body fat percentage is sufficiently low, the look of dense muscularity can be notably improved (barring any excess estrogen buildup from the testosterone). One could also add a non-aromatizing androgen like trenbolone or Halotestin, which should have an even more extreme effect on subcutaneous body fat and muscle hardness. Of course with the added androgen content any related side effects will become much more pronounced.

Package and Shipping Of Testosterone Propionate:

Under 25kg: inner: A PE bag in aluminum foil bag; Outside: carton

Over 25kg: inner: Double PE bags; Outside: 25kg/ fibre drum

Shipping:

With 3-5 days after your payment

FAQ Of Testosterone Propionate:

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is 1kg.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment.

Q3: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer a better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
