

99% Purity Anabolic Steroid Testosterone CAS 15262-86-9 For Bodybuilding

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Testosterone
- Minimum Order Quantity: 1KG
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25KG/Febr Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Product: Testosterone Isocaproate
- Cas No.: 15262-86-9
- MF: C₂₅H₃₈O₃
- MW: 386.57
- Appearance: White Powder
- Purity: 99.0%
- Shelf Life: 2 Years
- Highlight: **99% Anabolic Steroid Testosterone, Anabolic Steroid Testosterone Bodybuilding, 15262-86-9 Anabolic Steroid Testosterone**

Product Description

99% Purity Anabolic steroid Testosterone Isocaproate CAS 15262-86-9 For Bodybuilding

Basic Information form Of Testosterone Isocaproate:

Product Name	Testosterone Isocaproate
Cas No.	15262-86-9
Molecular Formula	C ₂₅ H ₃₈ O ₃
Molecular Weight	386.57
Purity	99.0%
Appearance	white powder
Shelf life	2 years

Description Of Testosterone Isocaproate:

Testosterone Isocaproate is a form of the male hormone testosterone. It is used to make sustanon and most commonly known as Nebido. After an application the isocaproate ester releases a long lasting effect of testosterone into the bloodstream, lasting approximately 10 days depending on the users metabolism and initial hormone levels. To maintain the physiological levels of the testosterone in the body it is necessary to receive applications every 10 days to maintain hormone levels.

Testosterone Isocaproate is not found individually but it is contained in some other drugs such as in Sustanon 250 and also in Omnadren, which are easily available in the market. Testosterone Isocaproate is somewhat same to the Testosterone Caproate but with a few exceptions. It has got same number of hydrogens, carbons, oxygen and same molecular weight but its active life is one day more as compared to Testosterone Caproate. Testosterone Isocaproate is bounded with a fatty acid or an ester which causes a delay in its release in the body. As told earlier that it has got a more active life which means it will stay in the body for a longer period of time and therefore to get it in the form of an injection once or at max twice a week is enough.

Chemical Characteristics

Testosterone Isocaproate is a modified form of the male hormone testosterone. It is an ester of a carboxylic acid bound to the 17-beta hydroxyl group. These modified forms of testosterone are not as polarized as free testosterone which generates slow absorption from the injection site. Once the testosterone isocaproate is in the bloodstream, the isocaproate ester separates from the testosterone making it free and active. This type of esterified steroid is designed to prolong the effect of the testosterone in the body, requiring less injections compared to other steroids that are not esterified. Testosterone isocaproate has a half life of approximately 10 days.

Isocaproate Profile

Isocaproate, it is not an anabolic steroid but an ester that can be attached to a steroid in the same fashion as the more popular Cypionate or Enanthate esters. Like the Cypionate and Enanthate, Isocaproate can also be attached to the testosterone hormone, but in the case of Isocaproate this will typically be the only place we see it attached. Testosterone-Isocaproate, a single ester form is virtually unheard of; if you find it then it was more than likely a specialty order, and there's really no reason to ever need Testosterone-Isocaproate in this single ester form. Where we'll find the Isocaproate ester most commonly and where it serves a large benefit is in testosterone mixtures; specifically Omnadren and Sustanon-250. Omnadren and Sustanon-250 are both testosterone compounds with four esters attached; four varying in size distinct esters that make up one total testosterone compound. For all intense purposes, these two compounds are virtually identical; their total makeup is almost the same with a single ester difference, and as such the same benefits can be obtained. The composition of each is as follows:

- Omnadren
- Testosterone-Propionate 30mg

- Testosterone-Phenylpropionate 60mg
- Testosterone-Isocaproate 60mg
- Testosterone-Caproate 100mg
- Sustanon-250
- Testosterone-Propionate 30mg
- Testosterone-Phenylpropionate 60mg
- Testosterone-Isocaproate 60mg
- Testosterone-Decanoate 100mg

With both compounds you have a 250mg/ml dosing of testosterone and by the mixture of small to large esters you receive the benefits associated with all forms. For example, you receive the benefits of a fast acting testosterone compound due to the Propionate and Phenylpropionate esters, and you receive the benefits of a long lasting testosterone due to the Caproate or Decanoate ester. As for the Isocaproate ester, this is a moderate sized ester that fills the role in an in-between sense between the small and large esters. At any rate, the Isocaproate ester plays an important role as it helps keep blood levels stable, and through the total compound you are receiving a total testosterone benefit for a long period of time. With all of this in mind, we want to take a look at the basic nature, the benefits of supplementation, and of course, the side-effects of use and in doing so enable you to reach the successful supplementation you desire.

Package and Shipping Of Testosterone Isocaproate:

Under 25kg: inner: A PE bag in aluminum foil bag; Outside: carton

Over 25kg: inner: Double PE bags; Outside: 25kg/ fibre drum

Shipping:

With 3-5 days after your payment

FAQ Of Testosterone Isocaproate:

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is 1kg.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment.

Q3: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer a better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
