Description Of Testosterone Decanoate

Testosterone Decanoate is available under the trade name "Neotest 250". Most people will have used testosterone with this ester in the popular testosterone blend "Sustanon 250", so it's far from something new on the market. It's just never been offered outside of a blend until a few years ago.

Basically, like all forms of esterified testosterone, what we're looking at is the parent hormone bound to a fatty acid (the ester) to delay its release into the body. With regards to the decanoate ester, this gives us a nice long active life in the body, and there's no reason to inject this more than once every week.

As with all forms of testosterone, this product will cause weight and strength gain, fat loss, a libido increase, an increase in IGF-1 levels, Red Blood Cell count, and of course increased recovery from training. worry about one hormone decaying at a different rate than the other.

Applications Of Nandrolone decanoate:

1. As is with all testosterone based steroids, Testosterone Decanoate as a powerful androgen can rapidly increase lean tissue on the body and aid in building a physique of pure muscle mass. As apt towards growth as it is, due to its ability to block the muscle wasting hormone cortisol, Testosterone Decanoate can be a good addition to any cutting cycle as well in an effort to lose fat and preserve muscle tissue. However, it should be noted, as all testosterone supplementation can lead to excess water retention Testosterone Decanoate can have a higher probability but this will largely be dependent on your food intake and aromatase inhibitor use. Yes, you can get ripped to shreds using Testosterone Decanoate if you approach it reasonably and responsibly.

2. For the performance enhancing athlete, the effects of Testosterone Decanoate represent a versatile list of possible outcomes. For the off-season athlete, this is an excellent steroid for promoting lean tissue growth. High levels of testosterone will enable you to build more muscle

mass, increase strength and do so with less body fat accumulation that would otherwise occur. High testosterone levels will promote a more powerful metabolism, and while you most certainly can still gain body fat you will now be able to make better use of your calories.

3. The effects of Testosterone Decanoate are equally beneficial to the dieting athlete. The athlete who is attempting to lose body fat will preserve more lean muscle tissue that is often lost during a calorie restricted diet due to the now present high testosterone levels. He will also find he is able to burn body fat at a more efficient rate due to the metabolic enhancement provided by higher testosterone levels.
