

Testosterone Anabolic Steroid Phenylpropionate CAS 1255-49-8

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Testosterone
- Minimum Order Quantity: 1KG
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25KG/Febr Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Name: Testosterone Phenylpropionate
- Cas No: 1255-49-8
- Appearance: White Crystalline Powder
- MF: C₂₈H₃₆O₃
- MW: 420.58
- Assay: 99.0%MIN
- Shelf Life: 2 Years
- Highlight: **Testosterone Anabolic Steroid Phenylpropionate**
, CAS 1255-49-8 Testosterone Anabolic Steroid

Product Description

Testosterone Anabolic Steroid Phenylpropionate CAS 1255-49-8

Basic Information form Of Testosterone Phenylpropionate:

Product Name	Testosterone phenylpropionate
Cas No.	1255-49-8
Chemical Formula	C ₂₈ H ₃₆ O ₃
Molecular Weight	420.58
Appearance	white crystalline powder
Assay	99.0%MIN
Shelf life	2 years

Description Of Testosterone Phenylpropionate:

Testosterone phenylpropionate is a slow-acting ester which has a release time of 1 to 3 weeks. Testosteronephenyl propionate is a drug that belongs to the androgens class of drugs. It is one of the components of Sustanon and Omnadren. Testosterone phenyl propionate is available for administration as injection. The injection has an active life of four to five days. It may be used alone or in combination with other esters for androgen replacement therapy in males with confirmed testosterone deficiency. However, its most popular usage is for increasing muscular mass and strength.

Clinical studies have demonstrated that it is less toxic to the liver and it produces less aromatization and water retention. The dosage ranges from 100mg to 400mg a week. Generally, it is necessary to administer testosterone phenylpropionate two or three times a week in order to increase the effect of the hormone in the body and to maintain the blood levels. Testosterone phenylpropionate also has the ability to increase the levels of IGF-1 which is a highly anabolic hormone that promotes muscle growth.

Application Of Testosterone Phenylpropionate

Testosterone Phenylpropionate is a hormone produced predominantly in the testes of males. It is responsible for nearly all of the sexual traits in males. This specific version is Testosterone with the Phenylpropionate ester attached. Testosterone Phenylpropionate has an active life of 4-5 day. Release time-wise, it is directly in the middle of the Propionate (short) and Cypionate (long) versions of Testosterone. It is recommended to inject Testosterone Phenylpropionate two times per week, although many prefer every third day.

It is responsible for promoting health and well-being through enhanced libido, energy, immunity, increased fat loss, gaining and maintaining lean muscle mass, preventing Osteoporosis (loss of bone density) and possible protection against heart disease. Testosterone is also responsible for normal growth and development of male sex organs and maintenance of secondary sex characteristics.

Effect of testosterone and similar, but the intramuscular injection of the response time is lasting, commonly used in clinical Wugao disease, cryptorchidism, male sexual hypofunction; Gynecology: For menorrhagia, uterine fibroids, senile osteoporosis and aplastic anemia. Usage: Pharmaceutical material, Steroid hormone, Anabolin. As a male hormone and anabolic hormones. Testosterone Phenylpropionate has an active life of 4-5 day. Release time-wise, it is directly in the middle of the Propionate (short) and Cypionate (long) versions of Testosterone. It is recommended to inject Testosterone Phenylpropionate two times per week, although many prefer every third day.

Function Of Testosterone Phenylpropionate

Testosteronephenyl propionate is a drug that belongs to the androgens class of drugs. It is one of the components of Sustanon and Omnadren. Testosterone phenyl propionate is available for administration as injection. The injection has an active life of four to five days. It may be used alone or in combination with other esters for androgen replacement therapy in males with confirmed testosterone deficiency. However, its most popular usage is for increasing muscular mass and strength. A positive characteristic that bodybuilders should know about this stuff is that side effects such as water retention appears very seldom. Also by taking testosterone phenylpropionate athletes report increase of appetite, aggressiveness and strength. In general by using this kind of testosterone in right way the effects are similar to other testosterone ester but it

doesn't require very frequent injections, and doesn't cause water retention.

Dosage Of Testosterone Phenylpropionate

1. Androgen deficiency syndrome: Intramuscular injection of 10 ~ 50mg once , 2 ~ 3 times a week.
2. Menorrhagia or uterine fibroids: Intramuscular injection of 25 ~ 50mg, 2 times a week.
