

Lean Muscle Raw Steroid Powder Testosterone Phenylpropionate CAS 1255-49-8

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Testosterone
- Minimum Order Quantity: 1KG
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25KG/Febr Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Name: Testosterone Phenylpropionate
- Cas No: 1255-49-8
- Appearance: White Crystalline Powder
- Molecular Formula: $C_{28}H_{36}O_3$
- Molecular Weight: 420.58
- Purity: 99.0%MIN
- Shelf Life: 2 Years
- Highlight: **Lean Muscle Raw Steroid Powder, Testosterone Phenylpropionate Raw Steroid Powder, CAS 1255-49-8 Testosterone Powder**

Product Description

Lean Muscle Raw Steroid Powder Testosterone Phenylpropionate CAS 1255-49-8

Basic Information form Of Testosterone Phenylpropionate:

Product Name	Testosterone phenylpropionate
Cas No.	1255-49-8
Molecular Formula	C ₂₈ H ₃₆ O ₃
Molecular Weight	420.58
Appearance	white crystalline powder
Assay	99.0%MIN
Shelf life	2 years

Description Of Testosterone Phenylpropionate:

PhenylPropionate has been combined with testosterone and nandrolone to create steroids like tribolan and libriol. Libriol is a mix of nandrolone and methandriol while tribolan is a mix of nandrolone and decanoate. Phenyl Propionate will not be found alone. Nandrolone is one of the most popular steroids in the world, since it can be used for gaining and losing weight with less of the aromatization affects that testosterone is known for. Nandrolone Phenyl Propionate will therefore contain the effects of Phenyl Propionate and nandrolone at the same time.

If you want to add lean muscles and gain a lot of strength while at Phenyl Propionate will aid in doing so. Nitrogen retention is what enables the body to synthesize and store more proteins. When dieting involves eating a lot of animal and plant proteins, you can expect to see a lot of changes in the volume of the muscles of the user. It is important to point out that Phenyl Propionate should be accompanied by dieting and exercise to improve the volume and strength in the muscles. Phenyl Propionate improves the amount of IGF in the muscle increasing the amount of androgen receptors in the muscles.

Users will have a lot of endurance, meaning that they will not get tired easily as they used to. They will not have sore muscles as they used to and they will do that while avoiding watery muscles. This means that they will be able to put in quantity and quality time into their exercising and bring out more results. Phenyl Propionate does so by increasing the number of red blood cells in the body of the user-the main reason it has been used for the management of anemia; a disease that is characterized by low red blood cell count.

Application Of Testosterone Phenylpropionate

Being a testosterone based steroid, Testosterone-Phenylpropionate has similar side-effects as that of any other testosterone steroid. However, the catch is that since it stays less in the body and has a short half-life of approximately 3 days it causes lesser side-effects as compared to the side-effects caused by other testosterone based steroids.

More than the side-effects, Testosterone-Phenylpropionate has positive effects because it is known to increase the health and well-being of the user since it doesn't cause water retention at quite the rate of other compounds or other effects caused by aromatization at such a significant rate. The side-effects only come in with the over-usage or abuse of this steroid, otherwise all goes well and the user will be able to enjoy benefits of lean muscles produced by this hormonal compound.

Funcation Of Testosterone Phenylpropionate

Testosteronephenyl propionate is a drug that belongs to the androgens class of drugs. It is one of the components of Sustanon and Omnadren. Testosterone phenyl propionate is available for administration as injection. The injection has an active life of four to five days. It may be used alone or in combination with other esters for androgen replacement therapy in males with confirmed testosterone deficiency. However, its most popular usage is for increasing muscular mass and strength. A positive characteristic that bodybuilders should know about this stuff is that side effects such water retention appears very seldom. Also by taking testosterone phenylpropionate athletes report increase of appetite, aggressiveness and strength. In general by using this kind of testosterone in right way the effects are similar to other testosterone ester but it doesn't require very frequent injections, and doesn't cause water retention.

The overall action of the drug is promoting well-being through enhanced libido, immunity, energy, increasing muscle mass and increased fat loss. It is not recommended to use high doses of testosterone phenyl propionate due to high androgenic effects of the drug. The androgenic/anabolic effects of the drug depend on the administered dose. Athletes consider that higher the dose, better the results, but higher doses imply higher risks associated to negative effects on the liver. Testosterone phenyl propionate is considered to bring good results in increasing testosterone levels, gaining strength and muscle mass. Due to stimulation of the Androgen Receptors, testosterone phenyl propionate may cause accelerated muscle mass, increased fat loss, muscle repair and growth. Since the body increases its muscular mass at an accelerated rate, more ingested food is shuttled directly to the muscle tissue. It is an indirect effect of testosterone on fat loss.

Testosterone Phenylpropionate Side effects

Being a testosterone based steroid, Testosterone-Phenylpropionate has similar side-effects as that of any other testosterone steroid. However, the catch is that since it stays less in the body and has a short half-life of approximately 3 days it causes lesser side-effects as compared to the side-effects caused by other testosterone based steroids. More than the side-effects, Testosterone-Phenylpropionate has positive effects because it is known to increase the health and well-being of the user since it doesn't cause water retention at quite the rate of other compounds or other effects caused by aromatization at such a significant rate. The side-effects only come in with the over-usage or abuse of this steroid, otherwise all goes well and the user will be able to enjoy benefits of lean muscles produced by this hormonal compound.

Side Effects caused by the Abuse of Testosterone-Phenylpropionate

If a person uses this steroid for more than recommended time period or more than recommended dosage he/she is sure to get the side-effects that comes with having too much testosterone in the body. With testosterone exceeding the normal level, the person is sure to have aromatization effects which bring with it the effects of gynecomastia, virilization and water retention. Gynecomastia results in males developing breast tissues and virilization causes females to develop male characteristics like deep voice and body hair. Water retention is a side-effect which shatters all the dreams of an athlete and bodybuilders by increasing the water in their muscles. This water will make the user feel tired and worn out which is definitely a great blockage in fulfilling ones' exercise goals.

How to Avoid the Side-Effects of Testosterone Phenylpropionate?

There are side-effects of using every steroid, but the best thing about this steroid is that its side-effects only comes in when it is over used. Thus there is only one way one can avoid the side-effects which comes with the over usage of this steroid and that is its proper administration. It is very important for the users of this steroid to monitor their dosages carefully and make sure they follow the proper cycle. Proper regulation of the usage of this hormone ensures the user get the maximum benefits and least side-effects.

Another point which must be taken into account is that since Testosterone-Phenylpropionate is a fast acting testosterone and gives great results the user must not abuse it in order to get faster results; there's no need. It has been seen that users in order to get immediate visible difference in their body increases the dosage of the hormone more than their body can handle which leads them to suffer the side-effects of the hormone. However, over using Testosterone-Phenylpropionate will do no good rather the user will end up having the side-effects which will definitely do no good to him/her. Thus it is very important to stick to the recommended dosage and time period so as to keep the side-effects of using this drug at bay.

Package and Shipping Of Testosterone Phenylpropionate:

Under 25kg: inner: A PE bag in aluminum foil bag; Outside: carton

Over 25kg: inner: Double PE bags; Outside: 25kg/ fibre drum

Shipping:

With 3-5 days after your payment

FAQ Of Testosterone Phenylpropionate:

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is 1kg.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment.

Q3: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer a better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
