

Testosterone Base Steroid Raw Powder For Bodybuilder Muscle Growth Steroid

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Testosterone
- Minimum Order Quantity: 1KG
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25KG/Febr Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Product Name: Testosterone Base
- Synonyms: Test Base
- Cas No: 58-22-0
- MF: C19H28O2
- MW: 288.42
- Purity: >99%M
- Appearance: White Crystalline Powder
- Shelf Life: 2 Years
- Highlight: **Testosterone Base Steroid Raw Powder, Bodybuilder Muscle Growth Steroid Raw Powder**

Product Description

Testosterone Base Steroid Raw Powder Testosterone For Bodybuilder Muscle Growth Steroid

Basic Information form Of Testosterone Base:

Name	Testosterone Base
Cas No.	58-22-0
Synonyms	Test Base
MF	C ₁₉ H ₂₈ O ₂
MW	288.42
Appearance	white crystalline powder
Purity	>99%
Shelf life	2 years

What Is Testosterone Base?

Testosterone base belongs to a class of hormones known as androgen; in fact, this is a primary androgen hormone. Testosterone itself is a very powerful hormone, mainly responsible for testicular and prostate development, as well as muscle tissue development, bone density and strength. In addition to these basic functions, testosterone is very important for our overall overall health and well-being; low levels of testosterone not only have a negative impact on muscle and bone strength, but also have a negative impact on our mindset.

Androgen is a member of the steroid hormone, testosterone is also highly synthetic. As androgen and anabolic, like all steroids, testosterone is derived from cholesterol and is regulated primarily through the production of luteinizing hormone (LH) and follicle stimulating hormone (FSH). By LH and FSH regulation, in order to release these hormones, must first stimulate the pituitary to achieve this purpose; once reached and release LH and FSH, can achieve testicular stimulation, leading to testosterone production. You can easily see, as important as testosterone production, pituitary gland is equally important; there is not enough pituitary function, natural testosterone production will not happen.

Product Image Of Testosterone Base:

Exogenous testosterone base birth

Although we naturally produce hormones for several centuries, various types of athletes have tried testicular extracts, but really used for human synthesis of testosterone first entered the scene in 1935, mainly due to chemists Adolf Butenandt and Leopold Ruzicka both Won the Nobel Prize for their job award. Since testosterone is now isolated and synthesized, the first successful injection of testosterone can be obtained in the form of testosterone propionate.

Once the first batch of testosterone is provided, soon after, many other forms will be introduced and ready for human use, but there are some important things you need to understand. All testosterone is the same in the general sense; it is attached to the ester, which gives it its own unique function, about the release of time and duration of activity, but most of the exogenous testosterone is just the same testosterone. We will explain together to understand the half-life.

Benefits of exogenous testosterone base use

There are many benefits to testing 600x testosterone use, and for anyone who uses them, they are usually the same because they may be largely dependent on dose dependency in overall effect. Many men who use testosterone are only part of the hormone replacement therapy program; the idea is to shorten the testosterone level to the normal range. Many other men use testosterone for completely different purposes; to raise the level far beyond the normal level to improve performance. No matter what your purpose, you can get the following benefits to a certain

extent:

Improve recovery capacity: the most appropriate example around training / exercise. The behavior of the training is not when the muscle is built but torn up; it is through the muscle tissue to establish the recovery process. Testosterone increases recovery rates, improves recovery efficiency, and leads to more efficient and more competent physique.

Stronger anti-decomposition protection: some hormones have a negative impact on muscle tissue, can promote body fat; the most noteworthy is the hormone cortisol. Testosterone can help block and reduce this negative hormone response, ensuring that your muscle tissue is protected and does not accumulate body fat.

Increased red blood cell count: testosterone can greatly improve your endurance; the higher the endurance will be able to do more work, ie the train. By this increase in erythrocytes, we can increase the amount of oxygen entering the blood, which increases the ability to work and can lead to greater muscle tissue efficiency.

Increased Protein Efficiency: By supplementing testosterone, we increase protein synthesis, thereby increasing the level and speed of muscle tissue, or protecting muscle tissue in calorie restricted diets. In addition, due to higher levels of testosterone, due to increased nitrogen production, we are able to maintain a higher level of protein storage.

These are the positive properties of supplemental or exogenous testosterone use, and the same effect can be achieved regardless of the form of testosterone. While these are not the only positive features, these characteristics are critical to our process and are critical to the goals we use around testosterone.

Package and Shipping Of Testosterone Base :

Under 25kg: inner: A PE bag in aluminum foil bag; Outside: carton

Over 25kg: inner: Double PE bags; Outside: 25kg/ fibre drum

Shipping:

With 3-5 days after your payment

FAQ Of Testosterone Base:

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is 1kg.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment.

Q3: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer a better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
