

GH Fragment 176-191 Polypeptide Hormones Powder 99%

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-GH Frag176-191
- Minimum Order Quantity: 5box
- Price: US\$ 65-75/ box
- Packaging Details: 5mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Name: Gh Frag 176-191
- CAS: 863288-34
- MW: 1817.1
- MF: C78H123N23O23S2
- Assay: 99%
- Appearance: White Powder
- Storage: 2-8
- Highlight: **Polypeptide Hormones Powder, HGH Fragment 176-191 Polypeptide**

Product Description

GH Fragment 176-191 Polypeptide Hormones Powder GH 176-191

Basic Information Form Of gh Frag 176-191

Product Name	gh frag 176-191
Cas No.	863288-34
Assay	99%
Appearance	White powder
MF	C78H123N23O23S2
MW	1817.1
Shelf Life	2 years
Storage	2-8

What Is gh Frag 176-191

Growth Hormone peptide fragment 176-191, also known as Frag 176-191, is a modified form of amino acids 176-191 of the GH polypeptide. Investigators at Monash University discovered that the fat-reducing effects of GH appear to be controlled by a small region near one end of the Growthy Hormone molecule. This region, which consists of amino acids 176-191, is less than 10% of the total size of the GH molecule and appears to have no effect on growth or insulin resistance. It works by mimicking the way natural Growthy Hormone regulates fat metabolism but without the adverse effects on blood sugar or growth that is seen with unmodified Growthy Hormone. Like Growthy Hormone, the fragment 176-191 stimulates lipolysis (the breakdown or destruction of fat) and inhibits lipogenesis (the transformation of nonfat food materials into body fat) both in laboratory testing and in animals and humans.

Fragment 176-191 as an Active Truncated Peptide

fragment 176-191 is an analog of the growthy hormone-releasing factor (GRF) which signals the effects of growthy hormone. It is a 15-mer

peptide residue of the C-terminus to which tyrosine is added at the N-terminal end. This synthetically produced hormone is very common to weightlifters and bodybuilders because of a number of physical benefits. Studies claimed that it actually acts on the reduction of excessive adipose tissues such as those in the abdominal area, increase in muscle mass, and enhances the lipid content of the body.

The (fragment 176-191) exhibits the ability to burn through stubborn adipose tissue, while increasing energy expenditure, muscle mass, and fat oxidation. All studies have pointed to the fact that the fragment is an effective treatment for obesity and fat loss, and much safer than its Human Growth Hormone counterpart.

GH Fragment 176-191 Usage

The GH fragment 176-191 stimulates lipolysis and inhibits lipogenesis both en vivo/en vitro.

Fragment 176-191 has shown no effect on growth or insulin resistance, unlike the full GH molecule. This is the newest, most powerful GH fragment on the market. Studies have shown sustained fatloss, aimed directly at adipose tissue.

It has been shown that the fat-reducing effects of GH appear to be controlled by a small analog region of the C-terminus end of the GH molecule. This region consists of amino acids 176-191, thus the name. This peptide fragment works by mimicking the way natural regulates fat metabolism but without the adverse effects on blood sugar or growth that is seen with unmodified.

Growth Hormone Peptides GH 176-191 Function

GH Fragment 176-191 is the end of the 191-amino acid GH molecular chain. GH is a hormone produced by the pituitary. GH is the synthetic version produced in a lab; both are comprised of the same 191-amino acid chain. GH, in particular elevated levels through the use of GH have long been associated with fat loss. They have also been associated with increases in muscularity, recovery and a host of health and anti-aging benefits. For GH Frag 176-191, the concentration of action is only on the adipose fat cells, specifically by increasing lipolytic action. GH Frag 176-191 has been shown to be such an effective fat loss tool it actually inhibits the formation of lipids and fatty acids. Equally important, as it is only a portion of the full GH hormone, the issues of hyperglycemia often associated with GH use are absent. This means there is no blood sugar issues as can occur at times with GH.

Package and Shipping of gh Frag 176-191

Package: 5mg/vial, 10vials/box

Shipping: With 3-5 days after your payment

FAQ of gh frag 176-191

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is one box.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment .

Q3: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
