

HGH 2mg/Vial Human Growth Peptides HGH Fragment 176-191 Cas 863288-34

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-HGH Frag176-191
- Minimum Order Quantity: 5box
- Price: US\$ 38-45/ box
- Packaging Details: 2mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Name: Hgh Frag 176-191
- CAS: 863288-34
- MF: C78H123N23O23S2
- Assay: 99%
- MW: 1817.1
- Storage: 2-8
- Appearance: White Powder
- Highlight: **2mg/Vial HGH Fragment 176-191, Cas 863288-34 Human Growth Peptides, Human Growth Fragment 176-191**

Product Description

HGH 2mg/vial Human Growth Peptides HGH fragment 176-191 cas 863288-34

Basic Information Form Of Hgh Frag 176-191

Product Name	hgh frag 176-191
Cas No.	863288-34
Assay	99.3%
Appearance	White powder
MF	C78H123N23O23S2
MW	1817.1
Shelf Life	2 years
Storage	2-8

What Is Hgh Frag 176-191

HGH Frag 176-191 is a fragment of the HGH peptide. Scientists found that if they truncated the peptide at the C terminal region they could isolate the fat loss attributes associated with HGH. Taking this fragment from HGH, including the peptide bonds from 176-191, they found they had developed a peptide that regulated fat loss 12.5 times better than regular HGH.

There is no question as to why bodybuilders of the modern era utilize human growth hormone. Its ability to regulate fat loss, pack on size and increase IGF-1 levels is just a few of the many attributes that many seek. HGH Frag 171-191 was developed so that bodybuilders and athletes not looking for the growth properties from HGH could still reap all the results of its amazing fat loss properties.

The hGH fragment released fat specifically from obese fat cells but not from lean ones, reduced new fat accumulation in all fat cells, enhanced the burning of fat. In rodents (rats and mice), hGH fragment reduced body fat in obese animals but, enhanced fat burning without changing food consumption or inducing growth (as it does not increase IGF levels) or any other unwanted Growth Hormone effect.

The (hGH fragment 176-191) exhibits the ability to burn through stubborn adipose tissue, while increasing energy expenditure, muscle mass, and fat oxidation. All studies have pointed to the fact that the fragment is an effective treatment for obesity and fat loss, and much safer than its Human Growth Hormone counterpart.

Application of Hgh Frag 176-191

the GH fragment 176-191 stimulates lipolysis and inhibits lipogenesis both en vivo/en vitro.

Fragment 176191 has shown no effect on growth or insulin resistance, unlike the full GH molecule. This is the newest, most powerful GH fragment on the market. Studies have shown sustained fatloss, aimed directly at adipose tissue.

It has been shown that the fat-reducing effects of GH appear to be controlled by a small analog region of the C-terminus end of the GH molecule. This region consists of amino acids 176-191, thus the name. This peptide fragment works by mimicking the way natural hGH regulates fat metabolism but without the adverse effects on blood sugar that is seen with unmodified hGH.

Package and Shipping of Hgh Frag 176-191

Package: 2mg/vial, 10vials/box

Shipping: With 3-5 days after your payment

FAQ of hgh frag 176-191

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is one box.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment .

Q3: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines,TNT, FEDEX, EMS, ect.
