

Human Growth Hormone Releasing Peptide GHRP-6 5mg For Lean Muscles

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-GHRP 6
- Minimum Order Quantity: 5 boxes
- Packaging Details: 5mg/vial, 10vials/box; 10mg/vial, 10vials/box
- Delivery Time: About 3 work days after your payment
- Payment Terms: , T/T, Western Union
- Supply Ability: 5000kg/Month

Product Specification

- Product: GHRP 6
- CAS: 87616-84-0
- Purity: >99%
- Appearance: White Powder
- MF: C46H56N12O6
- Molecular Weight: 873.01
- Storage: Store At -20°C. The Product Is Hygroscopic And Must Be Protected From Light.

Product Description

Human Growth Hormone Releasing Peptide GHRP-6 5mg For Lean Muscles

1.What is GHRP 6

The most commonly used of these peptides is to increase GH production. Other peptides in this category include GHRP-2, Hexarelin and ipamorelin. With regard to increasing GH, all of these are similar and are not necessary or beneficial to combine them. On the contrary, choose the most suitable for the specific situation.

The primary use of GHRP-6 is to provide increased GH levels, which also leads to an increase in IGF-1 levels. This helps to lose weight and, in some cases, also contribute to muscle harvesting. In general, GHRP is chosen as a substitute for GH use and is rarely used in conjunction with GH.

The reason GHRP-6 is superior to other GHRP is its effect on increasing appetite (which may also be a disadvantage) and it has significant value in reducing inflammation and helping to heal damage, particularly tendonitis

GHRP-6 releasing hexapeptide is one of several synthetic met-enkephalin analogs that include unnatural D-amino acids, were developed for their growth hormone releasing activity and are called GH secretagogues. They lack opioid activity but are potent stimulators of GH release. These secretagogues are distinct from GHRP in that they share no sequence relation and derive their function through action at a completely different receptor. This receptor was originally called the growth hormone secretagogue receptor, but due to subsequent discoveries, the hormone ghrelin is now considered the receptor's natural endogenous ligand. Therefore, these growth hormone secretagogues act as synthetic ghrelin mimetics.

Information Form of ghrp 6

Product Name	GHRP 6
CAS NO.	CAS 87616-84-0
MF	C78H123N23O23S2
Purity	>99%
Appearance	white lyophilized powder
origin	China
Molecular weight	873.01

When to use GHRP-6 ?

GHRP-6 is most commonly used for the same purpose that GH may use, but it is possible to choose a cost advantage that is beneficial to GHRP-6, GH, or where individuals tend to stimulate their GH to generate injections.

These objectives may include increased fat reduction, improved muscle gain when used in combination with anabolic steroids, improved skin & apos; s cosmetic properties, and improved wound healing.

GHRP-6 may not be considered to be useful for any of the above reasons. However, when using short-term amplification with ongoing procedures rather than steroid cycles or fat loss procedures, I recommend limiting the dose to the minimum recommended dose range.

How to use GHRP-6 ?

GHRP-6 is usually provided in a 5 mg vial, which should be stored under cold storage. (Acceptable, but do not mail them to non-refrigerated.)

Dilute the vial with the amount of sterile or bacteriostatic water. For example, the vials may be diluted with 2.5 mL of water to yield a solution of 2 mg / mL (2000 mcg / mL). After adding water, the vials are stored again in cold storage.

When administered, the appropriate volume is withdrawn from the vial from the (usually) insulin syringe according to the desired dose and the concentration of the formulation. In the above examples, the dose of 100 mcg would only require 0.05 mL, labeled on the insulin syringe. 300 micrograms will require 0.15 mL, or labeled "15 IU" on the insulin syringe.

Injection can be subcutaneous, intramuscular or intravenous according to personal preference.

At least twice a day, the best effect is 3x / day, at least 30-60 minutes before meals and when non-blood sugar rises (in other words, blood sugar has fallen since the most recent meal.) General For example, one can be from 50-300 mcg. When GHRH is used with GHRP-6, the dose should be reduced to 50-100 mcg.

For higher GH levels, higher doses within the recommended range will certainly increase the effect. With regard to healing benefits, such as for tendonitis, the low end of the range is usually sufficient and does not necessarily see a significantly greater effect when increasing the dose.

Although the GHRP-6 solution is still very good and has lost its effectiveness over time, there is no sharp cut between the general guidelines and the use of vials within one month of reconstruction. In the past, I will drop the vial and start a new one.

4.Package and Shipping of ghrp 6

Package: 5mg/vial, 10vials/box

Shipping: With 3-5 days after your payment

5.FAQ of ghrp 6

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is one box.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment.

Q3: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer a better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
