

Weight Loss Peptides GHRP 6 Improved Muscle Gain 5mg/vial CAS 87616-84-0

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-GHRP 6
- Minimum Order Quantity: 5 boxes
- Packaging Details: 5mg/vial, 10vials/box; 10mg/vial, 10vials/box
- Delivery Time: About 3 work days after your payment
- Payment Terms: , T/T, Western Union
- Supply Ability: 5000kg/Month

Product Specification

- Product: GHRP 6
- CAS: 87616-84-0
- Molecular Formula: C₄₆H₅₆N₁₂O₆
- Molecular Weight: 873.01
- Assay: 99%
- Appearance: White Lyophilized Powder
- Storage: Store At -20°C. The Product Is Hygroscopic And Must Be Protected From Light.

WHY CHOOSE US

- 1 Own Factory**
Hongbaiyi has its own factory, which covers 18,000 square meters and is equipped with 4 standardized production workshops.
- 2 Professional Supplier**
Hongbaiyi is a professional supplier of APIs, pharmaceutical intermediates, veterinary medicine, cosmetic raw, nutritional supplements and other natural active ingredients.
- 3 Quality Assurance**
With strict QC system, our product quality is very reliable and stable. Besides, we have strong technical research and development strength.
- 4 Sales Team**
The experienced sales team of Hongbaiyi offers 24*365 quality service and the products were exported to over 40 countries around the globe.

Product Description

Weight Loss Peptides GHRP 6 Improved Muscle Gain 5mg/vial CAS 87616-84-0

Information Form of ghrp 6

Product Name	GHRP 6
CAS NO.	CAS 87616-84-0
Molecular Formula	C78H123N23O23S2
Assay	>99%
Appearance	white lyophilized powder
origin	China
Molecular weight	873.01

Description Of GHRP 6

The major differences between the 3 GHRP peptides lays in their side effects. GHRP-6 causes a significant increase in hunger for many, therefore making it good for people looking to "bulk" but no so good for those trying to lose fat. GHRP-2 is often preferred for people dieting as it does not stimulate hunger, however it does raise cortisol (a stress hormone), prolactin (a hormone which can diminish sex drive) and aldosterone (a hormone which promotes water retention) more than GHRP-6 and Ipamorelin. Ipamorelin is similar to GHRP-6 in that it causes an increase in hunger (but it's not as dramatic as GHRP-6). However, since it does not raise cortisol, prolactin or aldosterone at recommended dosages it is a preferred choice for those who are sensitive to these hormones..

Dosage:

GHRP-6 is a water based injectable that you will have to mix with bac water, and store. Remember, it is important to store GHRP-6 correctly after mixing it - in the fridge. It should be good for up to 3-4 weeks, so only mix what you plan on using during that time frame.

After you carefully mix it, this compound is typically injected subcutaneously with a slin pin. For best results, it must be taken daily, and users will typically do several injections per day in order to space it out. Interestingly, GHRP-6 works best if you take it when blood sugar levels are low, and you should not eat anything for an hour after using it. If used solo, users will run 100-400 micrograms (mcg) per injection, and if stacked with another GH hormone, dosages can be cut in half.

Storage of GHRP-6

Lyophilized GHRP-6 although stable at room temperature for 3 weeks, should be stored desiccated below -20°C. Upon reconstitution GHRP-6 should be stored at 2-8°C between 2-7 days and for future use below -20°C. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Avoid multiple freeze-thaw cycles.

Usage and effects

to provide increased GH levels, which also results in increased IGF-1 levels.

This aids fat loss and in some instances aids muscle gain as well.

Generally, GHRP use is chosen as an alternate to GH use, and only rarely is combined with GH.

Why prefer GHRP-6 than other GHRP's peptide?

its effect on increasing appetite (which also can be a disadvantage), and its demonstrated value in reducing inflammation and helping to heal injury, particularly tendinitis.

When to use GHRP-6?

GHRP-6 is most generally used for the same purposes that GH might be used, but may be chosen where a cost advantage exists favoring GHRP-6, GH is not available, or the individual prefers the idea of stimulating his own GH production to injecting GH.

These purposes can include increased fat loss, improved muscle gain when used in combination with anabolic steroids, cosmetic improvement of the skin, and improved healing from injury.

There is no need to cycle GHRP use, and so therefore GHRP-6 may be used whenever it is thought to be useful for any of the above reasons. However, when usage is ongoing instead of short-term amplification of a steroid cycle or fat-loss program, I recommend limiting dosage to the minimum end of the suggested dosage range.

Increased effect from combining GHRP-6 with a GHRH

GHRP-6 is capable of inducing large increases in GH production when used alone. but when combining a GHRH with GHRP-6, only about half or a third as much GHRP-6 is needed to obtain the same increase in GH production. A preferred choice of GHRH is Mod GRF 1-29 (also known as CJC-1295 without DAC.)

How does GHRP-6 work?

GHRP-6 directly stimulates the pituitary gland which subsequently leads to an increase in the release of growth hormone into the body. As GHRP-6 directly affects the feedback loop that triggers changes in inhibition of the release of growth hormone, it can be used to restore the natural manufacturer of the growth hormone if natural secretion has been problematic because of long term tem and artificial. GHRP-6 is also reported to have an impact on our nephew system. They are potentially capable of protecting neurons and increasing the falsity of a person. The functioning of GHRP-6 is strikingly similar to the work of several steroids in the DHT family.

How to use GHRP-6?

GHRP-6 is most commonly provided in small vials of 5 mg, which should be stored under refrigeration. (It is acceptable however for them to be mailed unrefrigerated.) The vial is diluted with a convenient volume of sterile or bacteriostatic water. For example, the vial might be diluted with 2.5 mL of water, yielding a solution of 2 mg/mL (2000 mcg/mL.) After the water addition, the vial again will be stored under refrigeration.

When dosing, an appropriate volume will be drawn from the vial with (typically) an insulin syringe, according to the desired dose and the concentration of the preparation. In the above example, a 100 mcg dose would require only 0.05 mL, or "5 IU" as marked on an insulin syringe. A 300 mcg would require 0.15 mL, or "15 IU" as marked on an insulin syringe.

Injection may be subcutaneous, intramuscular, or intravenous according to personal preference.

Dosing will ordinarily be at least twice per day and preferably 3x/day for best effect, taken at least 30-60 minutes before a meal and at a time of non-elevated blood sugar (in other words, after blood sugar has had time to fall since the most recent meal.) The amount taken generally will be from 50-300 mcg at a time.

When using a GHRH along with GHRP-6, dosing should be reduced to 50-100 mcg at a time.

For increase in GH levels, higher doses within the suggested range definitely increase effect. With regard to healing benefit, for example for tendonitis, the low end of the range is often entirely sufficient and noticeably greater effect is not necessarily seen with increased dose.

While there is no sharp cut-off between a solution of GHRP-6 still being good and having lost potency with time, as a general guideline, a vial should be used within a month of having been reconstituted. Past this, I would discard the vial and start a new one.

Package and Shipping of ghrp 6

Package: 5mg/vial, 10vials/box

Shipping: With 3-5 days after your payment

FAQ of ghrp 6

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is one box.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment.

Q3: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer a better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
