

## Injectable Growth Hormone GHRP-6 For Improved Healing CAS 87616-84-0

### Our Product Introduction

for more products please visit us on [peptide-powder.com](http://peptide-powder.com)

#### Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-GHRP 6
- Minimum Order Quantity: 5 boxes
- Packaging Details: 5mg/vial, 10vials/box; 10mg/vial, 10vials/box
- Delivery Time: About 3 work days after your payment
- Payment Terms: , T/T, Western Union
- Supply Ability: 5000kg/Month

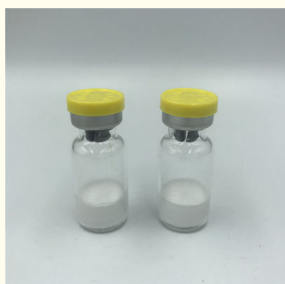

#### Product Specification

- Product: GHRP 6
- CAS: 87616-84-0
- Molecular Formula: C46H56N12O6
- Molecular Weight: 873.01
- Appearance: White Lyophilized Powder
- Assay: 98%
- Storage: Store At -20°C. The Product Is Hygroscopic And Must Be Protected From Light.

| Molecular weight  | 873.01                   |

#### Description Of GHRP 6

GHRP-6 (Growth Hormone Releasing Peptide – 6) is a hexapeptide with a chain comprised of 6 amino acids. It is one of several synthetic met-enkephalin analogs that include unnatural D-amino acids that were developed for their growth hormone releasing activity and are called growth hormone secretagogues. GHRP-6 is a true HGH secretagogue.

GHRP-6 is a peptide a Growth Hormone Releasing hexapeptide, it's a 28 amino acid peptide, and it works by signaling to the pituitary gland to begin secreting Growth Hormone.

To follow best practice guidelines for reconstituting GHRP-6, reconstitute in sterile, bacteriostatic, distilled water, with light sonication if necessary.

Storage of GHRP-6: Lyophilized GHRP-6 although stable at room temperature for 3 weeks, should be stored desiccated below -20°C. Upon reconstitution GHRP-6 should be stored at 2-8°C between 2-7 days and for future use below -20°C. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Avoid multiple freeze-thaw cycles.

GHRP-6 is an injectable peptide in the category of growth hormone releasing peptides, or GHRP's. The most common use of these peptides is to increase GH production. Other peptides in this category include GHRP-2, hexarelin, and ipamorelin. With regard to increasing GH, all of these work similarly, and there is no need or advantage to combining them. Instead, the one most suited for the particular case is chosen.

#### Picture of ghrp 6

### Application of ghrp 6

GHRP-6 is a water based injectable that you will have to mix with bac water, and store. Remember, it is important to store GHRP-6 correctly after mixing it - in the fridge. It should be good for up to 3-4 weeks, so only mix what you plan on using during that time frame.

After you carefully mix it, this compound is typically injected subcutaneous with a slin pin. For best results, it must be taken daily, and users will typically do several injections per day in order to space it out. Interestingly, GHRP-6 works best if you take it when blood sugar levels are low, and you should not eat anything for an hour after using it.

If used solo, users will run 100-400 micrograms (mcg) per injection, and if stacked with another GH hormone, dosages can be cut in half.

### Factors decreasing efficacy of GHRP-6:

For increasing GH levels, GHRP-6 is less effective in the presence of high blood glucose levels or high somatostatin levels, which result from high IGF-1 levels. For this reason, for best effect GHRP-6 should be taken while blood sugar is relatively low, for example about 30-60 minutes before a meal. GHRP-6 will have reduced effect if GH is being taken by injection, because GH increases IGF-1. Where GH use is limited to no more than about 14 IU per week, simultaneous GHRP-6 use probably still will increase GH somewhat further, but if GH use is greater than this then likely GHRP-6 injections will do little to nothing towards increasing GH levels any further.

Low thyroid levels also decrease efficacy of GHRP-6, and modestly increased thyroid levels, such as with 50-200 mcg/day of T4, or 12.5-50 mcg/day of T3, may improve efficacy. (If T3 is used, dosage should be divided into three doses per day.)

### Dosage

GHRP-6 is a water based injectable that you will have to mix with bac water, and store. Remember, it is important to store GHRP-6 correctly after mixing it - in the fridge. It should be good for up to 3-4 weeks, so only mix what you plan on using during that time frame.

After you carefully mix it, this compound is typically injected subcutaneous with a slin pin. For best results, it must be taken daily, and users will typically do several injections per day in order to space it out. Interestingly, GHRP-6 works best if you take it when blood sugar levels are low, and you should not eat anything for an hour after using it.

If used solo, users will run 100-400 micrograms (mcg) per injection, and if stacked with another GH hormone, dosages can be cut in half.

### Conclusion

GHRP-6 can effectively provide substantial increases in GH production. It's typically taken 2-3 times per day by injection at times when blood sugar is not elevated. Cost is generally moderate. The only common potential adverse side effect is increased hunger. Common alternates include GHRP-2, hexarelin, ipamorelin, or GH itself. GHRP-6 also may provide benefits which GH does not, via its action at the ghrelin receptor in various tissues of the body.

### Package and Shipping of ghrp 6

Package: 5mg/vial, 10vials/box

Shipping: With 3-5 days after your payment

#### FAQ of ghrp 6

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is one box.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment.

Q3: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer a better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
