Description Of GHRP 6

GHRP-6 is a potent stimulator of natural release. GHRP-6 is a Hexa-peptide that promotes food intake by stimulating hunger and helps increase energy metabolism. Releasing Peptides, similar to GHRP-6, are most commonly used for treatment of (GH) deficiencies, eating disorders, obesity, etc. Research has shown that use of these Peptides increases lean muscle mass, strength, stamina and decreases body fat.

Application of ghrp 6

GHRPs are not simply surrogates of GHRH, instead GHRP-6 is an artificial activator of a separate newly discovered receptor called Secretagogue Receptor (GHS-R). Soon Ghrelin was discovered, the endogenous ligand that binds to the GHS-R. Both Ghrelin and all the synthetic compounds such as GHRP-6 were termed "Secretagogues" (GHSs). One side effect of GHRP-6 is a significant increase in appetite

due to stimulating the release of Ghrelin, a peptide that is released naturally in the lining of the stomach that increases hunger and gastric emptying. Also, GHRP-6 causes stimulation of the anterior pituitary gland which causes an increase in release. The increased amounts of can cause the liver to secrete the , which improves the animal body's ability to burn fat and build muscle. Since GHRP-6 acts directly on the feedback loop which signals the inhibition release, GHRP-6 can re-stimulate the production Hormone.

GHRP-6 Dosage :

- 1.GHRP-6 is a water based injectable that you will have to mix with bac water, and store. Remember, it is important to store GHRP-6 correctly after mixing it - in the fridge. It should be good for up to 3-4 weeks, so only mix what you plan on using during that time frame.
- 2.After you carefully mix it, this compound is typically injected subcutan eously with a slin pin. For best results, it must be taken daily, and users will typically do several injections per day in order to space it out.
- 3.Interestingly, GHRP-6 works best if you take it when blood sugar levels are low, and you should not eat anything for an hour after using it.
- 4.If used solo, users will run 100-400 micrograms (mcg) per injection, and if stacked with another GH hormone, dosages can be cut in half.
