Description Of Ghrp 2

GH Releasing Peptide 2(GHRP2) substantially stimulates the pituitary gland's increased natural production of the body's own endogenous human GH . This therapy consists of daily periodic sub-lingual dosing. GH releasing peptide 2, GHRP2 has shown on it's own to robustly increase IGF-1 levels, and even greater results occurred when used with GH Releasing Hormone (GHRH) to which also stimulates the pituitary gland to produce increased natural secretion of human GH. This also boosts the hypothalamus function as well.
