

Ipamorelin Injectable Peptide Hormones 2mg Increased Lean Muscle Mass

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Ipamorelin
- Minimum Order Quantity: 5box
- Price: US\$ 35-40 / box
- Packaging Details: 2mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Name: Ipamorelin
- CAS: 170851-70-4
- Chemical Formula: C38H49N9O5
- Molecular Weight: 711.86
- Peptide Purity: >99%
- Aspect: White powder
- Shelf Life: 2 Years
- Highlight: **Ipamorelin Injectable Peptide, Increased Lean Muscle Mass Ipamorelin Peptide**

Product Description

Ipamorelin Injectable Peptide Hormones Ipamorelin 2mg Increased Lean Muscle Mass

Brief Introduction of Ipamorelin 2mg

Ipamorelin is a peptide that consists of a five amino acid chain. It's primarily known as a secretagogue, this means that it promotes secretion of certain hormones in the body. Specifically, Ipamorelin promotes the secretion of growth hormone from the pituitary gland. While doing so, it also works to mimic ghrelin. Ghrelin is the hunger hormone and is created within the confines of your stomach. Keep in mind that Ipamorelin only mimics ghrelin which helps stimulate your appetite, it is not a secretagogue of ghrelin.

Ipamorelin is a fascinating new muscle building discovery that is getting a lot of attention in the bodybuilding world. It is a synthetic peptide that has powerful Growth Hormone releasing properties. And these GH releasing properties are what is of interest to athletes and bodybuilders since they can make a tremendous difference in the amount of muscle you can grow and how quickly you burn fat.

Ipamorelin is a penta-peptide. (Aib-His-D-2-Nal-D- Phe-Lys-NH₂) And, the strength it displays may very well make regular old Growth Hormone (GH) obsolete. But what athletes and bodybuilders really want to know is what is this wonder peptide capable of doing, how is it used, and how does it compare to the other GHRP peptides?

Athletes are taking Ipamorelin in a 200mcg -300mcg dosage, two or three times daily, using a tiny insulin needle to inject. They usually start with the lower dose since side effects can include headaches or what feels like a head-rush. Ipamorelin can be taken at anytime but taking it about 30-45 minutes before a workout would seem ideal because of the pulse in Growth Hormone (GH) it creates allowing for maximum growth. Studies on the effects of Ipamorelin on bone growth, body weight, and GH release showed some interesting conclusions. In one experiment, various doses were administered over the course of 15 days to test the group's reactions.

There was a distinct and dose-dependent effect on body weight gain however, the treatment group did not show a change in total IGF-I levels. Nor did the treatment group produce serum markers of bone development. For example, the number of cells in the wide portion of the tibia (the shinbone) did not change significantly. This is a good thing because it suggests muscle growth with less potential for deformity of bone or cartilage.

The reaction of the pituitary to an aggressive i.V. Dose of Ipamorelin showed that plasma GH levels were notably reduced whereas they were unchanged after a comparable dose of GHRH. This is actually a good thing as it suggests that Ipamorelin may not decrease your body's natural GH production - further demonstrating that Ipamorelin is a selective GH releaser.

Ipamorelin does not induce hunger making it advantageous to those on a restricted calorie diet. And obviously, Ipamorelin's side-effects are enhanced when combined with anabolic steroids since they too influence Growth Hormone/Insulin Growth Factor release and production. Another document states that in healthy swine, Ipamorelin released GH with a consistency that is very comparable to GHRP-6. Also noteworthy was that none of the GH releasers tested affected FSH, LH, PRL or TSH blood serum plasma levels.

Ipamorelin in theory may increase Acetylcholine or Cortisol when used in higher dosages. However, and increase in Acetylcholine or Cortisol is even more likely with GHRP-2 and GHRP-6. In fact, in the case of Ipamorelin, there was little to no rise in Acetylcholine and Cortisol blood plasma levels even at injections more than 200 times higher than the effective dosage for comparable GH release.

This clearly proves that Ipamorelin is the first successful GHRP receptor agonist or chemical that binds to a receptor of a cell and triggers a response by that cell with a specific selectivity for the promotion of GH release by itself.

Another advantage to Ipamorelin is that it doesn't cause sudden spikes in prolactin or cortisol as does GHRP-2 and GHRP-6. Ipamorelin is slower in its delivery unlike GHRP's which spike GH levels at a more rapid rate. The slower release is more natural and has a more sustained effect.

All in all it looks as if Ipamorelin is the new wave in GH releasing peptides. It appears to be more potent, longer lasting and potentially safer to use in the long run. More studies are being conducted all the time but as it stands, Ipamorelin looks like a serious contender in the arsenal of anabolic advancement.

Basic Information Form of Ipamorelin for sale

Product Name	Ipamorelin 2mg
Cas No.	170851-70-4
Chemical Formula	C ₃₈ H ₄₉ N ₉ O ₅
Appearance	White powder
Purity:	99%
Shelf Life	2 years
Molecular Weight	711.86

Application Of Ipamorelin 2mg

Ipamorelin is an interesting peptide taken 300mcg twice daily or you could lower the dose for 3 times daily, side effects are head rushes, I would recommend taking this 30 minutes before workout ,with gear, Ipamorelin is a new and potent synthetic pentapeptide which has distinct and specific growth hormone (GH)-releasing properties. With the objective of investigating the effects on longitudinal bone growth rate , body weight , and GH release, Ipamorelin in different doses (0, 18, 90 and 450 µg/day) was injected three times daily for 15 days to test subjects, After intravital Tetracycline labelling on days 0, 6, and 13, LGR was determined by measuring the distance between the respective fluorescent bands in the proximal tibia metaphysis. Ipamorelin dose-dependently increased LGR from 42 µm/day in the vehicle group to 44, 50, and 52 µm/day in the treatment groups . There was also a pronounced and dose-dependent effect on body weight gain.

The treatment did not affect total IGF-I levels, or serum markers of bone formation and resorption. The number of tartrate-resistant acid phosphatase-positive multinuclear cells in the metaphysis of the tibia did not change significantly with treatment. The responsiveness of the pituitary to a provocative i.v. dose of Ipamorelin or GHRH showed that the plasma GH response was marginally reduced , after Ipamorelin, but unchanged after GHRH. The pituitary GH content was unchanged by Ipamorelin treatment. Whether Ipamorelin or other GH secretagogues may have a place in the treatment of children with growth retardation requires demonstration in future clinical studies. Before closing Ipamorelin is the most selective GH releaser you can get.

Ipamorelin doesn't create bumps in either prolactin or cortisol like GHRP-2 and -6. Ipa is a rifle bullet, not a shotgun blast like other GHRP's. Also it's great for those on relatively calorie restricted diets because it doesn't stimulate appetite.

Ipamorelin and Peptides are the way of the future ,expect in the next 5 years or less a dramatic change in the way we train and take the bodybuilding world by storm.

Package and Shipping of Ipamorelin 2mg

Package: 2mg/vial, 10vials/box

Shipping: With 3-5 days after your payment

FAQ of Ipamorelin 2mg

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is one box.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment .

Q3: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q4: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer better price for you.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
