

Sterile Lyophilized Peptide Ipamorelin 170851-70-4 For Bodybuilding

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Ipamorelin
- Minimum Order Quantity: 5box
- Price: US\$ 35-46 / box
- Packaging Details: 2mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Product Name: Ipamorelin
- CAS: 170851-70-4
- Chemical Formula: C38H49N9O5
- Molecular Weight: 711.86
- Peptide Purity: 99.0%
- Appearance: White Lyophilized Powder
- Shelf Life: 2 Years

Product Description

Sterile Lyophilized Peptide Ipamorelin 170851-70-4 For Bodybuilding

Brief Introduction of Ipamorelin

Ipamorelin is a fascinating new muscle building discovery that is getting a lot of attention in the bodybuilding world. Like the GHRP-6 peptide (growth hormone releasing hexapeptide), it is a synthetic peptide that has powerful Growth Hormone releasing properties. And these GH releasing properties are what is of interest to athletes and bodybuilders since they can make a tremendous difference in the amount of muscle you can grow and how quickly you burn fat.

Ipamorelin is a growth hormone releasing peptide (GHRP) similar to GHRP2 and GHRP6 that was developed by . It is a pentapeptide composed of 5 amino acids that causes a significant release of growth hormone from the anterior pituitary gland, and has the dual action of also suppressing somatostatin, a peptide hormone that inhibits the release of growth hormone. The benefits of using Ipamorelin are increased fat loss, maintenance of lean muscle tissue, rejuvenation and strengthening of joints, connective tissue and bone mass, as well as other anti aging benefits associated with GH treatment such as improved skin tone and hair quality. It can also be used to increase low GH levels when natural GH secretion has been inhibited by long-term abuse of synthetic GH.

Ipamorelin is the first growth hormone releasing peptide to be developed that has the unique selective property of stimulating only the release of GH without also significantly increasing cortisol, or prolactin, even at doses more than 200 times higher than an average effective dose. It has no effect on testosterone, LH, or FSH levels and no post cycle therapy is needed after using it. It releases GH with a strength comparable to GHRP6, but without the associated side effects. This makes ipamorelin a wonderful candidate for research and probably the safest peptide to use. In a clinical study conducted on 48 adult men, even mega doses of 600mcg/kg were demonstrated to be safe and well tolerated.

Basic Information Form of Ipamorelin

Product Name	Ipamorelin
Cas No.	170851-70-4
Chemical Formula	C ₃₈ H ₄₉ N ₉ O ₅
Appearance	White powder
Purity	99.1%
Shelf Life	2 years
Molecular Weight	711.86

Application Of Ipamorelin

Ipamorelin has been shown to be both highly potent and very selective in vivo and vitro situations, and has also demonstrated good safety and tolerability in human clinical studies.

Research has shown that Ipamorelin is hormone specific which means that the pituitary hormones such as cortisol are unaffected. In one study, it was found that young female adult rats had increased bone mass due to 12 weeks of treatment with ipamorelin. This peptide compared to other Hormone Releasing Peptides ensures the benefits without having to deal with possible negative side effects.

Ipamorelin in theory may increase Acetylcholine or Cortisol when used in higher dosages. However, an increase in Acetylcholine or Cortisol is even more likely with GHRP-2 and GHRP-6. In fact, in the case of Ipamorelin, there was little to no rise in Acetylcholine and Cortisol blood plasma levels even at injections more than 200 times higher than the effective dosage for comparable GH release.

How does it work?

After an athlete administers Ipamorelin, a selective pulse is sent that stimulates the hypothalamus/pituitary to release GH. This pulse can endure for approximately three hours after injection. Once the GH pulse is sent, the cells go directly to the muscle to support development while staying clear of any possible bone or cartilage growth.

This is good for Ipamorelin users, as long term usage will effect lean body muscle growth without the possibility of experiencing any bone or cartilage deformities. The same cannot be said for synthetic HGH users, who experience pronounced side effect in swelling joints and even in some cases Carpel Tunnel. Ipamorelin will increase cell synthesis, elevate secretion levels of insulin from pancreatic tissue, and increase ghrelin in the stomach – which helps release GH and control hunger. All of these functions work to promote fat loss, shuttling of nutrients, and building clean muscle mass.

Package and Shipping of Ipamorelin

Package: 2mg/vial, 10vials/box

Shipping: With 3-5 days after your payment

FAQ of Ipamorelin

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is one box.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment .

Q3: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q4: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer better price for you.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
