

## Anti Aging Peptide Ipamorelin Weight Loss Steroids For Help Build tight lean muscle

Our Product Introduction

for more products please visit us on [peptide-powder.com](http://peptide-powder.com)

### Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY- Ipamorelin
- Minimum Order Quantity: 5box
- Price: US\$ 36-46 / box
- Packaging Details: 2mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

### Product Specification

- Product Name: Ipamorelin
- CAS: 170851-70-4
- Chemical Formula: C38H49N9O5
- Molecular Weight: 711.86
- Appearance: White Lyophilized Powder
- Peptide Purity: 99.5%
- Shelf Life: 2 Years

## Product Description

### Anti Aging Peptide Ipamorelin Weight Loss Steroids For Help Build tight lean muscle

#### Brief Introduction of Ipamorelin

Ipamorelin is a fascinating new muscle building found in the bodybuilding world to get a lot of attention. Like the GHRP-6 peptide (growth hormone-releasing hexapeptide), it is a synthetic peptide with potent growth hormone-releasing properties. These GH release properties are of interest to athletes and bodybuilders because they can make significant differences in the amount of muscle you can grow and the rate at which you burn fat.

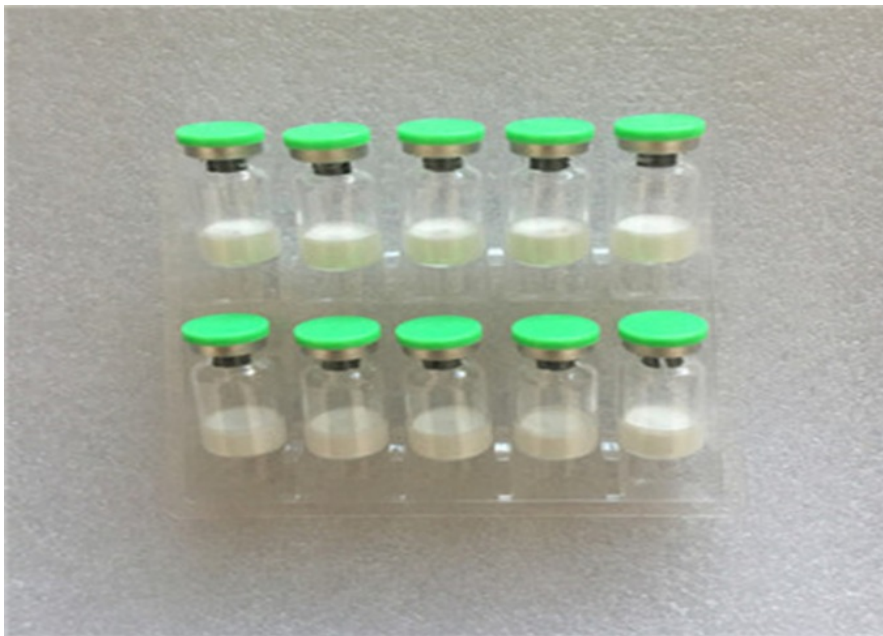

In my last article on Hexarelin, we list a list of the strongest and most modest GHRPs. Hexarelin ranks first as the most effective GHRP, but also causes high side effects and rapid desensitization. The other end of the spectrum is Ipamorelin - the warmest GHRP. But do not let its mild features fool you, this pentapeptide can be used to stimulate a very large GH pulse that produces the least amount of side effects. Ipamorelin can easily run at 1200 mcgs without destroying desensitization levels. Studies have shown that high doses of Molin, depending on the body's natural GH production, have little effect. This is an ideal choice for athletes or bodybuilders who close the body's natural GH production.

From the function of Ipamorelin, it can be said that GHRP-6 is similar to the way of increasing ghrelin and gastric motility, as well as targeting selective GH pulses. Although Ipamorelin's hunger is almost zero. This makes it a more versatile peptide for administration at bedtime. Unlike GHRP-6 and GHRP-2, ipaparin is shown to have little direct effect on cortisol or prolactin production at high doses. This means that the user can be higher doses and higher frequencies without worrying about elevated levels of cortisol and acetylcholine plasma. In short, it may be the warmest GHRP, but definitely not the weakest. In fact, as a GHRP, it has shown the longest duration, and at higher doses it is most effective. Ipamorelin's function is a slow building, more like a body of natural growth hormone (GH) release. Which makes it the healthiest choice!

#### Basic Information Form of Ipamorelin

|                  |              |
|------------------|--------------|
| Peptide Name     | Ipamorelin   |
| Cas No.          | 170851-70-4  |
| Chemical Formula | C38H49N9O5   |
| Appearance       | White powder |
| Purity           | 99.1%        |
| Shelf Life       | 2 years      |
| Molecular Weight | 711.86       |

### Application of Ipamorelin

Ipamorelin is an interesting peptide that takes 300 mg daily or you can reduce the dose by 3 times a day. Side effects are headaches. It is recommended to use gears 30 minutes before exercise. Ipamorelin is a new and effective synthetic pentapeptide, With significant and specific growth hormone (GH) release characteristics. To investigate the effects on longitudinal bone growth rate, body weight, and GH release, different doses (0, 18, 90, and 450 [mu] g / day) were injected three times a day for 15 days to test the subjects, In the tetracycline markers on days 0, 6 and 13, LGR was determined by measuring the distance between the fluorescent strips at the proximal end of the tibia. Iparazine increased the LGR from the 42 μm / day in the carrier group to 44, 50 and 52 μm / day in the treatment group in a dose-dependent manner

### How does it work

The athlete manages Ipamorelin after releasing a selective pulse that stimulates the hypothalamus / pituitary release of GH. This pulse can last about three hours after injection. Once the GH pulse is sent, the cells directly enter the muscle to support development while keeping clear any possible bone or cartilage growth. This is beneficial for Ipamorelin users because long-term use will affect slimming muscle growth without the possibility of experiencing any bone or cartilage deformity. Synthetic HGH users, for swollen joints and even in some cases will see significant side effects, that is, Carpel Tunnel. Ipamorelin will increase cell synthesis, increase insulin secretion from pancreatic tissue, and increase gastric ghrelin - which helps to release GH and control hunger. All of these features contribute to the promotion of fat reduction, nutrient shuttle, and the establishment of clean muscle groups.

### Package and Shipping of Ipamorelin

Package: 2mg/vial, 10vials/box

Shipping: With 3-5 days after your payment

### FAQ of Ipamorelin

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is one box.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment .

Q3: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q4: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer better price for you.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
