

99% Human Growth Peptide CJC-1295 with DAC 2mg CAS 863288-34-0 For Muscle Growth

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-CJC 1295 With DAC
- Minimum Order Quantity: 5 box
- Price: Negotiable
- Packaging Details: 2mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Peptide Name: CJC 1295 With DAC
- Molecular Formula: C165H271N47O46
- Molecular Weight: 3367.89
- CAS: 863288-34-0
- Purity: 99.5%
- Specification: 2mg/vial, 10vials/box
- Storage: Cool Dry Place
- Appearance: White powder
- Shelf Life: 2 Years

Product Description

99% Human Growth Peptide CJC-1295 with DAC 2mg CAS 863288-34-0 For Muscle Growth Basic Information Form:

Product Name	CJC 1295 With DAC 2mg
Cas No.	863288-34-0
Purity	99.5%
Appearance	White powder
MF	C152h252n44o42
MW	3649.30
Shelf Life	2 years
Condition	Cool Dry Place

Brief Introduction Of CJC 1295 With DAC 2mg

CJC-1295 promotes muscle mass, strength and muscle strength. CJC 1295 is a long-acting GHRH analogue. The growth hormone releasing hormone (GHRH) is also known as the growth hormone releasing factor (GRF or GHRF). Tetrahydro modifications of CJC 1295 with the drug complex (DAC) prolong the lifetime to release growth hormone (GH) and thus increase the therapeutic effect at a lower dosage rate than standard GH injections.

CJC-1295 is a tetrasubstituted 30-amino acid peptide hormone, primarily functioning as a releasing hormone (GHRH) analog. One of the advantages of CJC-1295 over traditional GHRH is its ability to bioconjugate with serum albumin, thus increasing its half-life and therapeutic window. It accomplishes this by using protecting groups around the amino acids of GHRH typically susceptible to enzymatic degradation.

The clinical research was ultimately successful for most research subjects. Ghrelin, released from the gut, which circulates and acts as a hunger hormone, has synergistic activity in the body with GHRH and also suppresses somatostatin to make way for the GHRH pulse.

Product Picture Of CJC 1295 With DAC 2mg

Applications CJC 1295 With Dac 2mg

Research study participants for often cycle doses 2-3 times per day (ex: before breakfast, before bed, and after exertion) for a period up to several weeks. These cycles, or pulses are meant to closely mimic natural secretion of GH. For CJC 1295, dosing is less frequent since the half-life with DAC is up to 8 days. Therefore, the cycle for CJC 1295 with DAC calls for once weekly injections that result in an overall increase of secretion of GH. At this point, research does not show any significant advantage for one cycle over the other, so it is a matter of personal preference.

CJC-1295 is a sterile, non-pyrogenic, white lyophilized powder intended for subcutaneous or intramuscular injection, after reconstitution with sterile Water for Injection. CJC-1295 can be injected subcutaneously with an insulin syringe. Dose per injection: 2mg. Injections per vial: 1 X 2mg dosages Amount to Inject: If you have used 0.5ml of water for mixing then a 2mg dosage = 0.50ml (or 50 units on Insulin Syringe). If you have used 1ml of water then a 2mg dosage = 1ml (or 100 units). Sample Injection Frequency: 2mg injected once per week (due to its long half-life).

What is CJC-1295 with DAC 2mg ?

CJC-1295 with DAC is a peptide hormone used as a GHRH (growth hormone releasing hormone) analogue, which has the ability to enhance growth hormone and IGF-1, which can be lifted from A to Z and athletes achieve their own fitness goals. Thus, athletes typically use peptides as part of their stacks to enhance their steroid cycle and performance. In this article, we will discuss all the benefits of this amazing peptide and show you how to use it correctly.

CJC-1295 increases the production of growth hormone as well as IGF-1 - which has anabolic effects in adults. However, it does not increase the levels of prolactin - high levels of which can create impotence and mental health problems in men. By increasing these two hormones, it enhances protein production in the body, which in turn, boosts muscle mass. It also induces lipolysis - the breakdown of fat tissue, boosts recovery from injuries, increases bone density, and also reduces aging factors like skin wrinkles. It can also stimulate cell growth, due to which it can be used to treat withered tissue or organs.

DAC or no DAC? As I have just stated above, when a person sees the term CJC 1295 without DAC this really means that they are looking at MOD GRF 1-29. This tetrasubstituted peptide is a modified version of the original GRF 1-29 peptide better known as Semorelin. Due to the extreme short half life of the original GRF 1-29, chemists were able to modify the peptide to offer a longer biological activity that reduced the metabolic clearance.

Although with MOD GRF 1-29 its modification had resulted in a greater peptide bond, the average user will still likely need to inject two to three times a day with a GHRP to get the maximum effectiveness for releasing endogenous growth hormone. Now when the drug affinity complex (DAC) was added to CJC 1295, it allowed for an even greater possibility to utilize smaller GH pulses (what was once thought of as a bleed) that, when combined with a GHRP, will activate growth hormone stores to release throughout the day and night. When the DAC component was added, this allowed the peptide half-life to be extended to about one week and also provided for steadier blood levels after injection. Now that we understand how important the DAC factor is, this becomes a much more viable and cost effective way to utilize CJC 1295 with DAC along with a GHRP. The DAC, when added, is able to bind to albumin that circulates the body, literally being able to last for days as it looks for receptors to bind to.

HOW CJC-1295 with DAC 2mg works?

CJC-1295 with DAC works by telling the pituitary to release the role of growth hormone, DAC. But keep in mind that the body is smart and it will try to keep the balance, so GH will be released by pulse. In fact, this part is why CJC-1295 works better with GHRP stacking.

Benefits

As a user, you must remember that using these types of growth hormone peptides, you will not necessarily achieve overnight results. So if that's what you expect, you should be somewhere else because patience is very important for CJC-1295 with DAC and other GHRH.

At the same time, over time, people who continue this compound can expect sleep better, more durable, anti-aging properties, reduced fat, lean muscle mass growth, damage repair and better vitality.

Package and Shipping of CJC 1295 With DAC 2mg

Package: 5mg/vial, 10vials/box

Shipping: With 3-5 days after your payment

FAQ Of CJC 1295 With DAC 2mg

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is one box.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment.

Q3: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer a better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
