

White Human Growth Hormone Peptide CJC1295 Without DAC CAS 863288-34-0

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-CJC 1295 With DAC
- Minimum Order Quantity: 5 box
- Price: Negotiable
- Packaging Details: 2mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Peptide Name: CJC 1295 WithOut DAC
- Molecular Formula: C165H271N47O46
- Molecular Weight: 3367.89
- CAS: 863288-34-0
- Purity: 99%
- Appearance: White Lyophilized Powder
- Storage: Cool Dry Place
- Shelf Life: 2 Years

WHY CHOOSE US

- 1 Own Factory**
Hongbaiyi has its own factory, which covers 18,000 square meters and is equipped with 4 standardized production workshops.
- 2 Professional Supplier**
Hongbaiyi is a professional supplier of APIs, pharmaceutical intermediates, veterinary medicine, cosmetic raw, nutritional supplements and other natural active ingredients.
- 3 Quality Assurance**
With strict QC system, our product quality is very reliable and stable. Besides, we have strong technical research and development strength.
- 4 Sales Team**
The experienced sales team of Hongbaiyi offers 24*365 quality service and the products were exported to over 40 countries around the globe.

Product Description

White Human Growth Hormone Peptide CJC1295 Without DAC CAS 863288-34-0

Basic Information Form:

Product Name	CJC 1295 Without DAC
Cas No.	863288-34-0
Purity	99%
Appearance	White Lyophilized powder
MF	C152H252N44O42
MW	3649.30
Shelf Life	2 years
Condition	Cool Dry Place

Brief Introduction Of CJC 1295 Without DAC

Modified GRF 1-29 is also known as Mod GRF 1-29, but even more commonly known as CJC-1295 without DAC. It is a protein that is 29 amino acids long and it is a GHRH analogue. CJC-1295 without DAC acts on receptors at the pituitary gland to stimulate the release of Human Growth Hormone.

CJC-1295 without DAC could be referred to more properly as a second generation derivative of GHRH.

GHRH is modified to create what is known as Releasing Factor (GRF) 1-29, also known as Sermorelin. GRF 1-29 is then further modified to create Mod GRF 1-29 which is CJC-1295 without DAC.

CJC-1295 can be used for any purpose of performance enhancement, although fat loss or recomping may be where it stands out the most. For the off-season athlete looking to pack on more size, CJC-1295 is not a very good choice, at least not when used alone.

Although it will promote anabolic activity, the overall anabolism it promotes will not be all that significant. However, when combined with other performance enhancing drugs, the individual may find he gets more out of them due to the increase in HGH and IGF-1 levels. He should also find that due to a stronger metabolism he is able to stay leaner when bulking than he may have otherwise.

This is not a license to eat like a pig; you can still gain fat when using CJC-1295 but you should have an easier time controlling fat gain when the peptide is in play. You may be able to get away with more than you would otherwise, but how much will be genetically dependent.

Product Picture Of CJC 1295 Without DAC

Description Of CJC 1295 Without Dac

Research study participants for often cycle doses 2-3 times per day (ex: before breakfast, before bed, and after exertion) for a period up to several weeks. These cycles, or pulses are meant to closely mimic natural secretion of GH. For CJC 1295, dosing is less frequent since the half-life with DAC is up to 8 days.

Therefore, the cycle for CJC 1295 with DAC calls for once weekly injections that result in an overall increase of secretion of GH. At this point, research does not show any significant advantage for one cycle over the other, so it is a matter of personal preference.

CJC-1295 is a sterile, non-pyrogenic, white lyophilized powder intended for subcutaneous or intramuscular injection, after reconstitution with sterile Water for Injection. CJC-1295 can be injected subcutaneously with an insulin syringe. Dose per injection: 2mg. Injections per vial: 1 X 2mg dosages Amount to Inject: If you have used 0.5ml of water for mixing then a 2mg dosage = 0.50ml (or 50 units on Insulin Syringe). If you have used 1ml of water then a 2mg dosage = 1ml (or 100 units). Sample Injection Frequency: 2mg injected once per week (due to its long half-life).

CJC1295 DAC has shown some amazing results as a hormone releasing hormone (GHRH) analog. Not only has CJC1295 shown the ability to increase hormone and secretion and its benefits, but it has been able to do so in very large amounts. Recent research studies have shown that CJC - 1295 stimulates GH and Secretion, and will keep a steady increase with no increase in prolactin, leading to intense fat loss, and increases protein synthesis.

CJC-1295 DAC is a long acting Hormone Releasing Hormone, which causes the anterior pituitary to release more hormone. The objective of the peptide was to treat visceral fat deposits in obese AIDS patients, as increased levels of exogenous are presumed to increase lipolysis (fat loss). The clinical research was ultimately successful for most research subjects. Ghrelin, released from the gut, which circulates and acts as a hunger hormone, has synergistic activity in the body with GHRH and also suppresses somatostatin to make way for the GHRH pulse. An example of a GHRP (GH Releasing Peptide) is Hexarelin or GHRP2. CJC 1295 DAC is an exceptionally designed peptide and is known for being the finest of the secretogues

Applications Of CJC 1295 Without Dac

Research study participants for often cycle doses 2-3 times per day (ex: before breakfast, before bed, and after exertion) for a period up to several weeks. These cycles, or pulses are meant to closely mimic natural secretion of GH. For CJC 1295, dosing is less frequent since the half-life with DAC is up to 8 days. Therefore, the cycle for CJC 1295 with DAC calls for once weekly injections that result in an overall increase of secretion of GH. At this point, research does not show any significant advantage for one cycle over the other, so it is a matter of personal preference.

CJC-1295 is a sterile, non-pyrogenic, white lyophilized powder intended for subcutaneous or intramuscular injection, after reconstitution with sterile Water for Injection. CJC-1295 can be injected subcutaneously with an insulin syringe. Dose per injection: 2mg. Injections per vial: 1 X 2mg dosages Amount to Inject: If you have used 0.5ml of water for mixing then a 2mg dosage = 0.50ml (or 50 units on Insulin Syringe). If you have used 1ml of water then a 2mg dosage = 1ml (or 100 units). Sample Injection Frequency: 2mg injected once per week (due to its long half-life).

Package and Shipping of CJC 1295 Without DAC

Package: 2mg/vial, 10vials/box

Shipping: With 3-5 days after your payment

FAQ Of CJC 1295 Without DAC

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is one box.

Q2: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment.

Q3: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer a better price for you.

Q4: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
