

## Anti-Aging Hexarelin 2mg /Vial Human Hormone Peptides For Bodybuilder CAS 140703-51-1

Our Product Introduction

for more products please visit us on [peptide-powder.com](http://peptide-powder.com)

### Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Hexarelin
- Minimum Order Quantity: 5box
- Price: US\$ 32-38/ box
- Packaging Details: 2mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

### Product Specification

- Product Name: Hexarelin
- CAS NO.: 140703-51-1
- Molecular Formula: C47H58N12O6
- Molecular Weight: 887.0
- Appearance: White Powder
- Peptide Purity: >99%
- Shelf Life: 2 Years

## Product Description

### Anti-Aging Hexarelin 2mg /Vial Human Hormone Peptides For Bodybuilder CAS 140703-51-1

#### Basic Information Form of Hexarelin

|                   |                               |
|-------------------|-------------------------------|
| Product Name      | Hexarelin                     |
| Molecular Formula | C47H58N12O6                   |
| Cas No            | 140703-51-1                   |
| Appearance        | White Powder                  |
| Purity            | >99%                          |
| Molecular Weight  | 887.0                         |
| Shelf Life        | 2 years                       |
| Synonyms          | Hexarelin Acetate, Examorelin |

#### What Is Hexarelin

Hexarelin Indications: Hexarelin (HEX) is a GH GH secretagogue that is a family of growth factors that promotes the release of growth hormone (GH), similar to GHRP-6. Can be used for medical treatment of GH deficiency. Hexarelin is a good systemic anabolic. In addition, since we know that GH use will lead to the closure of your endogenous hormone levels, Hexarelin also seems to be very useful for "GH-PCT" or "-PCT" because it can help restore the natural level of these hormones to their cycle The Ghrelin is an appetite-regulating factor secreted from peripheral organs that participates in energy-balanced regulation by binding to receptors leading to pituitary secretion.

The activation of the downstream mitogen-activated protein kinase Akt, nitric oxide synthase and AMPK cascade in different cell systems is regulated by binding the ghrelin and the secretagogue receptor GHSR1a to activation. An important feature of GHSR1a shows constitutive activity with basic activity in the absence of agonists, leading to a high degree of receptor internalization and signal transduction activity. For obesity treatment, the pro-agonist of the ghrelin receptor may be of particular significance that this activity appears to provide a sufficient height of the required complement signal, possibly through the GH axis.

Hexarelin, also known as Examorelin, is a growth hormone (GH), especially a hexapeptide-like growth hormone secretion receptor (GHSR). Hexarelin is similar in many respects to GHRP-6; however, it has been shown to produce a greater increase in naturally occurring GH. Some data suggest that it may be the strongest synthetic hormone for growth hormone (GHRH) on the market.

#### Product Picture of Hexarelin

#### Application Of Hexarelin

Since it does not significantly increase the level of Ghrelin responsible for increasing hunger and faster gastric emptying, Hexarelin uses (as opposed to extreme appetite increases with GHRP-6) without loss of appetite.

When Hexarelin is administered as a subcutaneous injection, it activates the pituitary by pulse, just like GHRP-6, which helps to circulate the hormone in the body. Unlike GHRP-6, it does not cause any hunger side effects. Hexarelin not only improves the level of GH in the body, but also inhibits somatostatin, which is the main reason to inhibit the release of GH. This means there will be more GH rich. In addition,

hexarelin is the strongest available GHRP, so users should note that desensitization may be much faster than other GHRP. This makes it less suitable for long-term use, but since hexarelin can improve the health of IGF-1 and GH, it can work perfectly as a PCT tool in synthetic GH / IGF-1 cycles. The potency of the peptide should not be underestimated, along with the production of cortisol and the increase in prolactin. There is nothing close to the possibility of increased levels of steroid use, but it has the strongest affinity to improve cortisol / prolactin compared to other GHRP.

Hexarelin (HEX) is a synthetic growth-hormone-releasing peptides(GHRP), structurally similar to GHRP-6, in the factor family which stimulates the release of growth hormone (GH). It can medically be used to treat GH deficiency. Hexarelin is getting more popular to be used as a performance enhancement drug.

#### Package and Shipping of Hexarelin

Package: 2mg/vial, 10vials/box

Shipping: With 3-5 days after your payment

#### FAQ of Hexarelin

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is one box.

Q2: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q3: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment .

Q4: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer better price for you.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines,TNT, FEDEX, EMS, ect.
