

Hexarelin Peptide Hormones Bodybuilding CAS 140703-51-1 White Lyophilized Powder

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Hexarelin
- Minimum Order Quantity: 5box
- Price: US\$ 32-39/ box
- Packaging Details: 2mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Product Name: Hexarelin
- CAS NO.: 140703-51-1
- Molecular Formula: C47H58N12O6
- Molecular Weight: 887.0
- Appearance: White Powder
- Peptide Purity: 99.5%
- Shelf Life: 2 Years

Product Description

Hexarelin Peptide Hormones Bodybuilding CAS 140703-51-1 White Lyophilized Powder

Basic Information Form of Hexarelin

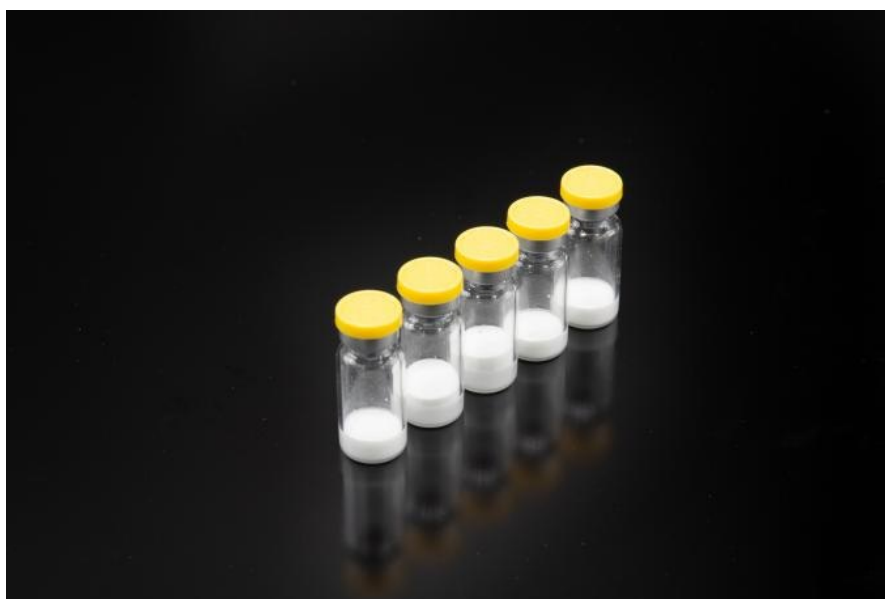

Product Name	Hexarelin
Molecular Formula	C47H58N12O6
Cas No	140703-51-1
Appearance	White Powder
Purity	99.5%
Molecular Weight	887.0
Shelf Life	2 years
Synonyms	Hexarelin Acetate, Examorelin

What Is Hexarelin

Hexarelin is a six-amino acid peptide. Studies have shown that hexarelin is actually more effective and longer lasting than growth hormone releasing hormone (GHRH). It is also known that GHRP-6 has a synergistic effect with GHRH, causing a far greater release than either of these substances alone. By combining GHRP-6 with Hexarelin, a more potent GH releasing peptide combination is created than ever heard of. The potential clinical usefulness of these GH releasing hexapeptides is also reinforced by observations that long-term administration produces elevations in circulating IGF-1 concentrations. Long term treatment with GHRP-6 similarly has been shown to elevate IGF-1 as well as IGF-binding protein-3 concentrations and promote linear growth.

Hexarelin comes in a freeze dried powder just like the other GHRP peptides and storage should be done in a cool dry place until reconstituted and placed in a refrigerator. Bacteriostatic water is used to reconstitute the powder and an insulin syringe is the preferred method for administering subcutaneous injections of hexarelin. Users will notice 200mcgs is the saturation dose for hexarelin and over a few weeks of use total desensitization may begin to take place. Also, the occasional flare up of the pituitary has been noted when dosing far beyond saturation doses. Desensitization can be cleared easily by taking a break from hexarelin usage for a few days to a few weeks. This GHRP is the strongest, and because of the desensitization factor, I believe the optimal way to use this peptide would be to blend it at low doses with other GHRP's like GHRP2, GHRP6 or iPamorelin.

Product Picture of Hexarelin

Application Of Hexarelin

Hexarelin (HEX) is a peptide GH secretagogue, structurally similar to GHRP-6, in the factor family which stimulates the release of growth hormone (GH). It can be used medically to treat GH deficiency. Hexarelin is becoming a popular choice as a performance enhancement drug. Due to Hexarelin's ability to increase secretion of natural Hormone, most of its effects are similar to those of synthetic GH, although to a slightly lesser extent. Effects of its use include: increase in strength, growth of new muscle fibers, increase in the size of already existing muscle fibers, neural protection, joint rejuvenation, protection and healing. Also, the GH receptors in adipose (fat) tissue allow for potential fat reduction with Hexarelin use. The increase of circulating GH through Hexarelin use causes levels of Insulin-Like Growth Factor (IGF-1) to rise in the liver. IGF-1 is the prime cause of muscle growth in response to GH stimulation.

Functions and Traits Of Hexarelin

Hexarelin is comprised of a chain of amino acids that when administered stimulates the pituitary in a pulsating fashion causing it to release more GH into the body. Unfortunately, at this time it is not fully understood how Hexarelin causes such a strong increase in GH compared to say GHRP-6; data merely shows that the increase is significantly more.

The use of Hexarelin has also been shown to increase prolactin and cortisol levels in the body, far more so than other GH products. Prolactin increases should not be as strong as they may be with certain anabolic steroids, but they may be significant in some cases. Hexarelin will not increase Ghrelin levels in the body like GHRP-6 despite being very similar on a structural basis.

Data has also shown Hexarelin to be one of the faster acting GH products on the market but also one of the few that stops working after a set amount of time. GH levels should increase quickly and in a beneficial manner in as little as four weeks. However, use past the sixteen week mark has been shown to produce little to no results. Use of any worth will normally fall in the 8-12 week range with 4-6 weeks of no use (minimum) between Hexarelin cycles. The peptide will not render pituitary function (GH production) post use as will anabolic steroids in regards to the testicles, but it does appear to have a short lived actionable period of use.

Effects Of Hexarelin

As with all GH products, Hexarelin carries with it numerous benefits. Because it is one of the most power GHRH hormones on the market, it may be the most beneficial to the performance athlete. Human Growth Hormone (HGH) will always be the most effective of all, but when it comes to GHRH items, fragments and the like, Hexarelin is perhaps the top choice.

The off-season athlete should find increases in mass and strength, increased recovery and an ability to maintain lower levels of body fat all a reality with this compound. As with any GH product, results will be dependent on diet and training routines, but also strongly dependent on the other items being used. The user will find his anabolic steroid cycle or other performance based items to be far more effective when using a GH product. He will not find a lot of benefit in terms of anabolism when used alone.

For the cutting athlete, much of what's said for the off-season athlete can be said again, but in this case, it's the fat loss, the enhanced metabolism that's most beneficial. Recovery will also play a large role in terms of benefits being that recovery often suffers during a hard diet. Important note - although significant anabolism will not be present when used alone in an off-season, if used alone when cutting, increased rates in fat burning will certainly exist.

Perhaps the most beneficial effects of Hexarelin surround its healing properties. Data has shown this to be one of the most beneficial GH products in this regard. We cannot call it a suitable long-term option for the purpose of anti-aging due to the short-lived use that seems to exist, but it's recovery type benefits are still hard to ignore.

Such benefits can include:

1. Joint healing (not masking or false pain relief, but actual healing)
2. Strengthening of the Neural system
3. Muscle fiber repair (ideal for injuries)
4. Direct increase of bone density
5. Heart protection (some data has shown it may heal heart tissue, including the healing of scar tissue to the relieving of pressure at the left ventricle)

Package and Shipping of Hexarelin

Package: 2mg/vial, 10vials/box

Shipping: With 3-5 days after your payment

FAQ of Hexarelin

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is one box.

Q2: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q3: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment .

Q4: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer better price for you.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
