

High Quality Human Growth Hormone Peptide Hexarelin 140703-51-1 for Muscle Building

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Hexarelin
- Minimum Order Quantity: 5box
- Price: US\$ 33-38/ box
- Packaging Details: 2mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Product Name: Hexarelin
- CAS NO.: 140703-51-1
- MF: C47H58N12O6
- MW: 887.0
- Appearance: White Powder
- Peptide Purity: 99.4%
- Shelf Life: 2 Years

Product Description

High Quality Human Growth Hormone Peptide Hexarelin 140703-51-1 for Muscle Building

Basic Information Form of Hexarelin

Product Name	Hexarelin
Molecular Formula	C47H58N12O6
Cas No	140703-51-1
Appearance	White Powder
Purity	99.4%
Molecular Weight	887.0
Shelf Life	2 years
Synonyms	Hexarelin Acetate, Examorelin

What Is Hexarelin

Hexarelin Indications: Hexarelin (HEX) is a peptide GH secretagogue, structurally similar to GHRP-6, in the grow factor family which stimulates the release of grow hormone (GH). It can be used medically to treat GH deficiency. Hexarelin is a good all purpose anabolic. Also, since we know that and GH use produces a shutdown of your endogenous levels of those hormones, Hexarelin also seems very useful for "GH-PCT" or "-PCT", as it can help restore your natural levels of those hormones after a cycle of them.

Ghrelin is an appetite-regulating factor secreted from peripheral organs that is involved in regulation of energy homoeostasis via binding to the receptor resulting in the secretion of by the pituitary gland. The pathway activated by binding of ghrelin to the secretagogue receptor, GHSR1a, regulates the activation of the downstream mitogen-activated protein kinase, Akt, nitric oxide synthase, and AMPK cascades in different cellular systems. One of the important features of GHSR1a displays constitutive activity possessing basal activity in the absence of an agonist, resulting in a high degree of receptor internalization as well as of signaling activity. Inverse agonists for the ghrelin receptor could be particularly interesting for the treatment of obesity. This activity seems to provide a tonic signal required for the development of normal height, probably through an effect on the GH axis.

Product Picture of Hexarelin

Application Of Hexarelin

Hexarelin is considered to be the strongest peptide stimulating GH secretion. With its use, the increase in cortisol and prolactin levels is also high enough. GHRP-2 is less strong than Hexarelin, but the increase in cortisol and prolactin levels is less too. GHRP-6 is less strong than GHRP-2, but when used in dosage up to 100mcg, it has no influence on the levels of cortisol and prolactin, and in dosage more than 100mcg, the increase in cortisol and prolactin levels is modest.

Hexarelin is a peptide structurally similar to GHRP-6, which stimulates secretion of endogenous GH. Hexarelin has the majority of synthetic GH effects, but these effects are less evident with Hexarelin than with GH. The main effects of Hexarelin include increase of strength, growth of new muscle fibers, improving of vessels state, reduction of fat mass. The main difference of Hexarelin from GHRP-6 is that Hexarelin does not

promote appetite, because it does not increase the level of ghrelin in the body.

How Does It Work?

When Hexarelin is given as a subcutaneous injection, it activates the pituitary via a pulse, just like GHRP-6, and helps circulate growth hormone in the body. Unlike GHRP-6, it does not induce any hunger side effects. Hexarelin has the ability to not only raise the level of GH in the body but to also suppress somatostatin, which is the main culprit that inhibits GH from being released. This means that there will be more GH in abundance. In addition, hexarelin is the strongest GHRP available, so users should notice that desensitization can come much quicker than other GHRP's. This makes it less ideal for long term use, but with hexarelin's ability to raise healthy levels of IGF-1 and GH it can work perfect as a PCT tool for those coming off a synthetic GH/IGF-1 cycle. The potency of this peptide should not be underestimated and it comes with an increase in cortisol production as well as prolactin. Nothing close to what might be seen in elevated levels from steroid use, but compared to other GHRP's it has the strongest affinity to raise cortisol/prolactin.

Package and Shipping of Hexarelin

Package: 2mg/vial, 10vials/box

Shipping: With 3-5 days after your payment

FAQ of Hexarelin

Q1: Do you Accept Sample Order?

A: Yes. The smallest order we accept is one box.

Q2: How long does it take to me if I order?

A: About 3-5 days upon receipt of payment.

Q3: Do you accept VISA business credit card?

A: Yes. VISA business credit card is in our payment .

Q4: Is there any discount?

A: Yes, if you want to purchase larger quantity, we can offer better price for you.

Q5: What kind of transportation do you have?

A: We have many ways of transportations, eg: Air, Sea, Special Lines, TNT, FEDEX, EMS, ect.
