

## 99.5 purity Body Building Peptides Hexarelin 5mg White Powder CAS 140703-51-1

Our Product Introduction

for more products please visit us on [peptide-powder.com](http://peptide-powder.com)

### Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Hexarelin
- Minimum Order Quantity: 5 boxes
- Price: US\$ 32-39/ box
- Packaging Details: 5mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: MoneyGram, Western Union, T/T
- Supply Ability: 20000boxes/Month

### Product Specification

- Name: Hexarelin 5mg For Sale
- CAS No.: 140703-51-1
- Molecular Formula: C47H58N12O6
- Molecular Weight: 887.0
- External Material: White Powder Peptide
- Peptide Purity: 99.5%
- Shelf Life: 2 Years
- Size: 5mg

## Product Description

### 99.5 Purity Body Building Peptides Hexarelin 5mg White Powder CAS 140703-51-1

#### Basic information on Hexarelin 5mg:

Product Name	Hexarelin 5mg for Sale
Molecular Formula	C47H58N12O6
Cas No	140703-51-1
Appearance	White Powder
Purity	99.5%
Molecular Weight	887.0
Shelf Life	2 years
Synonyms	Hexarelin Acetate, Examorelin

#### What Is Hexarelin for Sale?

Hexarelin has shown the potential to aid in joint recovery, protection, healing, and neuroprotection, and increase muscle fiber size, and build strength when administered to subjects.

This peptide is also thought to reduce overall adipose tissue, thus helping subjects lose fat. However, any form of growth was simply the result of increased hormone levels; gastric excretion was not accelerated and appetite was not stimulated.

Hexarelin (Hexarelin 5mg) is a synthetic hexapeptide in the growth factor family that stimulates the release of growth hormone (GH) and does not interfere with the body's ability to produce its own GH. Structurally, Hexarelin (Hexarelin Acetate) is similar in structure to GHRP-6 but without the appetite increase because of its inability to drastically increase Ghrelin levels which is responsible for the increased appetite and quicker gastric emptying. Hexarelin is a synthetic growth hormone secretagogue made from six amino acids. It contains powerful growth hormone-releasing properties in the human body. Hexarelin in studies over a certain period has shown that it reduces visceral fat. Hexarelin (Hexarelin Acetate) like other Growth Hormone Releasing Peptides are most effective synergistically when administered with GHRH such as Sermorelin or Modified GRF 1-29. The increase of circulating GH through Hexarelin use causes levels of Insulin-Like Growth Factor (IGF-1) to rise in the liver. IGF-1 is the prime cause of muscle growth in response to GH stimulation. Users of IGF-1 typically experience increased strength and muscle mass, as well as a very pronounced fat loss.

#### Hexarelin – Potent Synthetic GH Analog

Growth hormones, or GH, is a vital hormones released by the pituitary gland of both men and women. Growth hormones are important because they are critical to a healthy metabolism, lean mass build-up, cell regeneration, skin thickness, and the overall well-being of humans.

A decline in the level of growth hormones can adversely impact human health. This reduction in hormone levels is not uncommon, especially in adults and aged people, and also when people suffer from inherent growth hormone deficiency.

So, how do we beat this commonly occurring phenomenon of growth hormone reduction?

There are medications to beat this, but there are some serious adverse effects caused by them, and are not readily bioavailable. The other alternative is peptides. The main advantage of peptides is they are similar to natural hormones and are highly stable, readily bioavailable, and cause minimal side effects.

#### Benefits and Positive Effects of Hexarelin for Sale

Several health benefits of Hexarelin include:

- Elevated growth hormone release
- Increased lean muscle mass
- Increased metabolism and fat reduction
- The improved recovery rate of injuries
- Improved bone density and muscle strength
- Potential effects on insulin growth factor (IGF-1)
- Elevated levels of ACTH hormones
