Application Of Epitalon

Epitalon is one of the most interesting anti-aging substance on the market. Epitalon can Life extension by elongation of telomeres and telomerase activation, they maintain the body strong and healthy. Telomerase (a.k.a. telomere terminal transferase) is the enzyme capable to elongate telomeres in human bodies, protecting the DNA from the damage caused by aging.

Epitalon is a small peptide of 4 amino acids: Ala-Glu-Asp-Gly and can be administered via injection, as a nasal spray, or through the skin. The most effective route of administering it is via injection, either subcutaneously or intramuscularly. The peptide is typically given 2-3 times a day for 10-20 days in doses of 5-10 mg each. This cycle is repeated once every six to twelve months, but Epitalon can be given as often as desired. There are no negative side effects from the drug ever reported in over 100 studies on the peptide and from clinical use in Russia since 1990. Epitalon works mainly on the endocrine system but has effects on the entire body.
