Product Description

Legit Steroid Powder Trenbolone Acetate 10161-34-9 For Muscle Building

Description Of Trenbolone Acetate:

Tren Acetate (or Tren A, TA) has the molecular formula of $C_{20}H_{24}O_3$ and has an anabolic-androgenic ratio of 500:500. It has an active life of 2-3 days and has the molecular weight of 270.3706 g/mol at the base. Trenbolone Acetate, a 19-nor steroid, is derived from the compound Nandrolone. It is characterized by strong androgenic properties and no estrogenic activity. This anabolic steroid has a binding affinity for androgen receptor five times the strength Testosterone.

Trenbolone acetate is admired globally by elite athletes as it can dramatically improve the uptake of nitrogen by muscles and improve the level of protein synthesis. Ideal for cutting cycles, Tren A does not get metabolized by aromatase or 5α -reductase into estrogenic compounds like estradiol or into Dihydrotestosterone (DHT).

Trenbolone exhibits interesting stacking behavior. Combination with either Dianabol or Anadrol gives a very strong synergistic effect. Even if the same total milligram amount of steroid is used per week, results are much better with such a combination than with any of these steroids used alone Trenbolone Acetate.

While trenbolone use is not necessary to achieve excellent results in an anabolic steroid cycle, it can be a remarkable aid towards such results.

Applications Trenbolone Acetate:

Bodybuilding Steroids Trenbolone Acetate is very fast acting. Therefore, bodybuilders choosing to use this substance often find that daily injections are best for keep blood levels as consistent as possible. Simply put . Trenbolone Acetate is the most powerful overall steroid in use by bodybuilders today. Tren, as it is often called, is both highly androgenic and anabolic. It is chemically unable to aromatize, and therefore produces no estrogen buildup. This, along with its high androgenic properties, makes the muscle produced by this drug very hard and defined.

Tren Acetate can be used as pharmaceutical material. Its main function is to Promote metabolism. Anabolic effects include growth of muscle mass and strength, increased bone density and strength, and stimulation of linear growth and bone maturation.

Tren acetate is the most anabolic of all the non-estrogenic commercial steroids, with muscle-building properties often compared to test and Dianabol but without the same level of water retention and without estrogen conversion.
