Description Of 17 - Methyltestosterone:

Methyltestosterones (brand names:[1] Android, Androral, Oraviron, Testred, Virilon) is a 17-alpha-alkylated anabolic steroid used to treat men with a testosterone deficiency.[2] It bears close structural similarity to testosterone, but has a methyl group at C17 in order to increase oral bioavailability. It is used as a feed additive to produce predominately male populations of tilapia. Methyltestosterone is a 17-alpha-alkylated anabolic steroid used to treat men with a testosterone deficiency. It is also used in women to treat breast cancer, breast pain, swelling due to pregnancy, and with the addition of estrogen it can treat symptoms of menopause.

A testosterone can promote male sexual organs and use for seedling stage changes. Methyl testosterone is a steroid hormone derived from androgen, present in mammals and other vertebrates. Methyl testosterone is mainly secreted in male and female ovarian tests, although a small amount is also secreted by the adrenal gland, methyltestosterone is the main male sex hormone and anabolic steroids.

Methyl testosterone plays a key role in male reproductive tissue such as testicular and prostate development. In addition, methyltestosterone is essential for both health and well-being and for the prevention of osteoporosis. Methyltestosterone is conserved in most vertebrates, although fish are slightly different from the so-called 11-ketone testosterone.
