

Pure Testosterone Steroid Powder 17-Methyltestosterone With Androgen Supplement

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-Testosterone
- Minimum Order Quantity: 1KG
- Price: Negotiable
- Packaging Details: Aluminum Bag or 25KG/Febr Drum
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Product: 17-Methyltestosterone
- Cas No.: 58-18-4
- MF: C₂₀H₃₀O₂
- MW: 302.45
- Assay: 98.0%
- Appearance: White Crystalline Powder
- Shelf Life: 2 Years
- Highlight: **Testosterone Steroid 17-Methyltestosterone, 17-Methyltestosterone Androgen Supplement**

Product Description

Pure Testosteron Methyltestosterone with Androgen Supplement 17-Methyltestosterone

Basic Information form Of 17 - Methyltestosterone:

Product Name	Methyltestosteron
Other Name	17-Alpha-Methyl-Testosterone;17-Methyltestosteron
Cas No.	58-18-4
MF	C ₂₀ H ₃₀ O ₂
MW	302.45
Purity	99.0%
Appearance	white crystalline powder
Shelf life	2 years

Description Of Methyltestosterone:

Methyltestosteron is a 17-alpha-alkylated anabolic steroid used to treat men with a testosterone deficiency. It bears close structural similarity to testosterone, but has a methyl group at C17 in order to increase oral bioavailability.

Methyltestosterone is one of the oldest available oral steroids. It is produced by many various manufacturers and sold in a number of countries including the U.S.. It is quite androgenic, with minimal anabolic effects. For athletic purposes, methyltestosterone is generally only used to stimulate aggression among power lifters and those looking to boost up their workouts.

Picture Of Methyltestosterone:

**Use Of Methyltestosterone:**

Methyltestosterone is used for replacing the hormone testosterone when the body does not make enough and stimulating puberty. Treating advanced breast cancer in women who are 1 to 5 years postmenopause or in premenopausal women with a hormone-sensitive tumor. Methyltestosterone is an androgen hormone. It works by increasing the level of testosterone in the blood.

Administration Of Methyltestosterone:

In a therapeutic setting, standard male Methyltestosterone doses will fall in the 10-40mg per day range. This is a wide range in dosing, and it is impossible to predict where the individual will fall until his full condition is examined. It is not uncommon for the starting dose to be 40mg per day or close to it and then a lower dose used for maintenance. Use may also surpass the recommended 6-8 week range if lab results show the individual is maintaining proper liver and lipid health.

In a performance setting, standard male Methyltestosterone doses will normally fall in the 40-50mg per day range for 6-8 weeks of use. However, keep in mind that very few athletes will benefit from this steroid's use and will normally find there are better alternatives.

Female Methyltestosterone doses will be a little different than male plans and in no case is there any recommended female performance level plan. In a therapeutic setting, 2.5mg per day along with esterified estrogen is standard. This is where Estratest tablets will be useful as they are a mixture of Methyltestosterone and esterified estrogen.

Package and Shipping Of Methyltestosterone:

Under 25kg: inner: A PE bag in aluminum foil bag; Outside: carton

Over 25kg: inner: Double PE bags; Outside: 25kg/ fibre drum

With 3-5 days after your payment
