

High Purity CJC1295 Without DAC H.G.H Peptide For Muscle Building

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-CJC 1295 Without DAC
- Minimum Order Quantity: 5 box
- Price: US \$45-49 / Box
- Packaging Details: 2mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Name: CJC1295 Without DAC
- Appearance: White powder
- Specification: 2mg/vial, 10vials/box
- CAS: 863288-34-0
- MW: 3367.89
- Storage: Cool Dry Place
- Shelf Life: 2 Years
- Highlight: **High Purity CJC1295 Peptide, Muscle Building CJC1295 Peptide**

Product Description

High Purity CJC1295 Without DAC H.G.H Peptide For Muscle Building Basic Information Form Of Cjc1295 Without Dac

Product Name	Cjc1295 Without Dac
Cas No.	863288-34-0
Purity	99.5%
Appearance	White powder
MF	C152h252n44o42
Shelf Life	2 years
Condition	Cool Dry Place

Brief Introduction of Cjc1295 Without Dac

Research study participants for often cycle doses 2-3 times per day (ex: before breakfast, before bed, and after exertion) for a period up to several weeks. These cycles, or pulses are meant to closely mimic natural secretion of GH. For CJC 1295, dosing is less frequent since the half-life with DAC is up to 8 days.

Therefore, the cycle for CJC 1295 with DAC calls for once weekly injections that result in an overall increase of secretion of GH. At this point, research does not show any significant advantage for one cycle over the other, so it is a matter of personal preference.

CJC-1295 is a sterile, non-pyrogenic, white lyophilized powder intended for subcutaneous or intramuscular injection, after reconstitution with sterile Water for Injection. CJC-1295 can be injected subcutaneously with an insulin syringe. Dose per injection: 2mg. Injections per vial: 1 X 2mg dosages Amount to Inject: If you have used 0.5ml of water for mixing then a 2mg dosage = 0.50ml (or 50 units on Insulin Syringe). If you have used 1ml of water then a 2mg dosage = 1ml (or 100 units). Sample Injection Frequency: 2mg injected once per week (due to its long half-life).

CJC1295 DAC has shown some amazing results as a hormone releasing hormone (GHRH) analog. Not only has CJC1295 shown the ability to increase hormone and secretion and its benefits, but it has been able to do so in very large amounts. Recent research studies have shown that CJC - 1295 stimulates GH and Secretion, and will keep a steady increase with no increase in prolactin, leading to intense fat loss, and increases protein synthesis.

CJC-1295 DAC is a long acting Hormone Releasing Hormone, which causes the anterior pituitary to release more hormone. The objective of the peptide was to treat visceral fat deposits in obese AIDS patients, as increased levels of exogenous are presumed to increase lipolysis (fat loss). The clinical research was ultimately successful for most research subjects. Ghrelin, released from the gut, which circulates and acts as a hunger hormone, has synergistic activity in the body with GHRH and also suppresses somatostatin to make way for the GHRH pulse. An example of a GHRP (GH Releasing Peptide) is Hexarelin or GHRP2. CJC 1295 DAC is an exceptionally designed peptide and is known for being the finest of the secretagogues

Application of Cjc1295 Without Dac

The DAC technology in the CJC-1295 enables the compound to bind itself covalently with any circulating albumin, after it has been administered through a subcutaneous injection. However, the reason why the half-life could be extended from a few minutes to several days is more profound. The reactive group in the CJC-1295 binds to a peptide through bioconjugation. The peptide then finds a nucleophilic unit within the blood and reacts with it in order to create a firmer bond.

When using any GHRH, it should always be remembered that positive results cannot be achieved overnight. These compounds act steadily over time, and the best results can be achieved slowly, and with a nutritious diet and a proper exercise regime. Also, these peptides are not sex-specific, so they do not have any androgenic effects. They can be used by women in the same dosages that men do.

What is CJC-1295 without DAC and used for?

Modified GRF 1-29 is also known as Mod GRF 1-29, but even more commonly known as CJC-1295 without DAC. It is a protein that is 29 amino acids long and it is a GHRH analogue. CJC-1295 without DAC acts on receptors at the pituitary gland to stimulate the release of H.G.H.

CJC-1295 without DAC could be referred to more properly as a second generation derivative of GHRH. GHRH is modified to create what is known as Releasing Factor (GRF) 1-29, also known as Sermorelin. GRF 1-29 is then further modified to create Mod GRF 1-29 which is CJC-1295 without DAC.

Feedback of Cjc1295 Without Dac

HBV bodybuilding peptides PT-141/ PT 141 10 ..

★★★★★

Really happy with the awesome customer service i was provided by Tracy Zhang. Very friendly and professi onal. Quality product!
