## Product Description

### What is 99% Beauty Materials Nonapeptide-1(Melanostatine) White Peptides For Skin?

White Peptide Nonapeptide-1 (Melanostatine) is a peptide that inhibits skin darkening.  $\alpha$ -MSH hormone is responsible for inducing darkening of the skin caused by external stimuli. Peptide-White inhibits alpha-MSH and prevents skin darkening. MSH increases during pregnancy due to certain diseases, such as diabetes, and excessive sun exposure.

Nonapeptide-1(Melanostatine) also protects an important fibre responsible for the elasticity, moisture and strength of the skin, thus keeping it smooth and preventing the formation of fine lines and roughness.

Nonapeptide-1(Melanostatine) stimulates blood flow, which is beneficial in the treatment of under-eye bags. Nonapeptide-1(Melanostatine) increases the brightness of the skin, reduces wrinkles and prevents the darkening of the skin caused by inflammation.

Beauty Materials White Peptide reduces the depth of wrinkles, increases skin elasticity, prevents premature ageing, lightens and brightens the skin and contributes to overall healthy, supple skin.
