Product Description

What is CAS 1036207-61-0 Cosmetic Peptide Tetrapeptide-30 For Skin Lightening?

Tetrapeptide-30 greatly helps to prevent and fade the signs of acne, melasma and hyperpigmentation, which are all common skin disorders of darkened skin types.

Tetrapeptide-30 is a skin brightening peptide consisting of four amino acids. Tetrapeptide-30 acts as a tyrosinase inhibitor to reduce hyperpigmentation and lighten skin tone by reducing the amount of tyrosinase and inhibiting the activation of melanocytes.

The peptide works by inhibiting tyrosinase (the enzyme needed to create melanin), preventing the transfer of melanin to the top layer of the skin in the process. By doing so, it safely disrupts the pathways that lead to hyperpigmentation and uneven skin tone. Tetrapeptide-30 also helps to heal acne, reduce redness and inflammation, and make the skin look brighter and more even.
