

White Powder HGH Fragment 176-191 2mg/Vial CAS 221231-10-3

Our Product Introduction

for more products please visit us on peptide-powder.com

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-HGH Frag176-191
- Minimum Order Quantity: 5box
- Price: US\$ 37-41/ box
- Packaging Details: 2mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: MoneyGram, Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Name: HGH Fragment 176-191
- CAS: 863288-34
- MW: 1817.1
- Appearance: White powder
- MF: C78H123N23O23S2
- Specification: 2mg/vial, 10vials/box
- Storage: 2-8
- Highlight: 2mg/Vial Frag 176 191,
CAS 221231-10-3 HGH Fragment 176-191,
Hgh Fragment Peptides Powder

Product Description

White Powder HGH Fragment 176-191 2mg/Vial CAS 221231-10-3 With Factory price

Basic Information Form Of HGH Fragment 176-191

Product Name	HGH Fragment 176-191
Cas No.	863288-34
Peptide Purity	99.2%
Appearance	White powder
MF	C78H123N23O23S2
MW	1817.1
Shelf Life	2 years
Storage	2-8

Brief Introduction Of HGH Fragment 176-191

The HGH Fragment is a modified form of amino acids 176-191 at the C-terminal region of the human growth hormone (HGH). Studies have shown that it works by mimicking the way natural HGH regulates fat metabolism but without the adverse effects on insulin sensitivity (blood sugar) or cell proliferation (muscle growth) that is seen with unmodified HGH. Like unmodified GH, the HGH fragment 176-191 stimulates lipolysis (breaking down of fat) and inhibits lipogenesis (the formation of fatty acids and other lipids in the body).

HGH fragment 176-191 is meant to be 12.5 times stronger than human growth hormone (HGH) for weight loss than standard human growth hormone (HGH).

Of particular note is that in studies HGH fragment 176-191 had the ability to increase IGF-1 levels which translates into the fragments ability to give anti-aging effects.

Benefits Of HGH Fragment 176-191

In trials, HGH fragment 176-191 users have been found to lose fat, whereas lean mass is preserved. This means that unwanted fat is burned off, whereas desirable muscle mass is preserved and even enhanced. This effect is seen in both people with a normal Body Mass Index, and those who are overweight and obese. It also does not appear to have any harmful effects on blood glucose levels.

The dosage of HGH fragment 176-191 is from 400 mcg to 2000 mcg per day, by subcutaneous injection. As the injectable amount is relatively small, it can be combined with sterile water to make measuring easier. The dose can be divided into three, and taken at intervals during the day. It is recommended to start at the smaller dosage level and maintain this level for three months, after which the level can be increased. It's suggested that injections are given each day a couple of hours before you undertake cardio exercise, or a few hours before you go to bed. Avoid eating for a couple of hours before and after receiving the injection, this gives you the optimum conditions for the burning of stored fat. As with all supplements, it is not a good idea to take more than the suggested dose – it will not improve your results and could be harmful.

Feedback Of HGH Fragment 176-191

HBV bodybuilding peptides PT-141/ PT 141 10...

★★★★★ Really happy with the awesome customer service I was provided by Tracy Zhang. Very friendly and professional. Quality product!

Tracy Zhang 27 Jun 2020

Happy to receive your review. Many thanks
