

HGH Frag 176-191 Polypeptide Hormones Powder 5mg/vial For Muscle Growth

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-HGH Frag176-191
- Minimum Order Quantity: 5box
- Price: US\$ 64-68/ box
- Packaging Details: 5mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Name: HGH Frag 176-191
- CAS: 863288-34
- Appearance: White powder
- MW: 1817.1
- MF: C78H123N23O23S2
- Specification: 5mg/vial, 10vials/box
- Storage: 2-8

Product Description

HGH Frag 176-191 Polypeptide Hormones Powder 5mg/vial For Muscle Growth

Basic Information Form Of HGH Frag 176-191

Product Name	HGH Frag176-191
Cas No.	863288-34
Peptide Purity	99.4%
Appearance	White powder
MF	C78H123N23O23S2
MW	1817.1
Shelf Life	2 years
Storage	2-8

What Is HGH Fragment 176-191

Growth Hormone peptide fragment 176-191, also known as Frag 176-191, is a modified form of amino acids 176-191 of the GH polypeptide. Investigators at Monash University discovered that the fat-reducing effects of GH appear to be controlled by a small region near one end of the Growthy Hormone molecule. This region, which consists of amino acids 176-191, is less than 10% of the total size of the GH molecule and appears to have no effect on growth or insulin resistance. It works by mimicking the way natural Growthy Hormone regulates fat metabolism but without the adverse effects on blood sugar or growth that is seen with unmodified Growthy Hormone. Like Growthy Hormone, the fragment 176-191 stimulates lipolysis (the breakdown or destruction of fat) and inhibits lipogenesis (the transformation of nonfat food materials into body fat) both in laboratory testing and in animals and humans.

Usage Of HGH Frag 176-191

The HGH fragment 176-191 stimulates lipolysis and inhibits lipogenesis both en vivo/en vitro.

Fragment 176-191 has shown no effect on growth or insulin resistance, unlike the full GH molecule. This is the newest, most powerful GH fragment on the market. Studies have shown sustained fatloss, aimed directly at adipose tissue.

It has been shown that the fat-reducing effects of GH appear to be controlled by a small analog region of the C-terminus end of the GH molecule. This region consists of amino acids 176-191, thus the name. This peptide fragment works by mimicking the way natural regulates fat metabolism but without the adverse effects on blood sugar or growth that is seen with unmodified.

Feedback Of HGH Frag 176-191
