What Is GHRP 2

GH Releasing Peptide 2(GHRP2) substantially stimulates the pituitary gland's increased natural production of the body's own endogenous human GH . This therapy consists of daily periodic sub-lingual dosing. GH releasing peptide 2, GHRP2 has shown on it's own to robustly increase IGF-1 levels, and even greater results occurred when used with GH Releasing Hormone (GHRH) to which also stimulates the pituitary gland to produce increased natural secretion of human GH. This also boosts the hypothalamus function as well.

Benefits Of GHRP 2 :

1. It enhances endurance
2. Makes the heart strong
3. Decreases fat via lipolysis
4. Inhibits the uptake of glucose by the liver and thus works in opposition to insulin
5. Helps to maintain the function of the pancreas
- 6 Stimulates the process of glucogenesis by the liver
7. It increases the retention of calcium and thus makes the bone strong by enhancing bone mineralization.
8. GHRP-2 strengthens the immune system
9. Boosts production of -1 which offers an anabolic (muscle building) effect in turn
10. Speeds up the wound healing or healing following a surgery
11. Improves sex desire and drive and it does so by hypothalamus stimulation
