## Product Description

### What is 196604-48-5 Cosmetic Peptide Acetyl Dipeptide-1 Cetyl Ester For Anti-Aging?

Dipeptide-1 acetyl ester is a product obtained by coupling the tyrosine acetyl ester in dipeptide-1 (q.v.) with the arginine cetyl ester in dipeptide-1.

### Applications and properties of Acetyl Dipeptide-1 Cetyl Ester

Anti-wrinkle, muscle relaxation and skin comfort. The peptide has been shown to relieve the skin tension that leads to the formation of expression lines, as well as to reduce the perception of negative sensations in stressed, sensitive, irritated, dry or itchy skin. Mechanism of action.

Acetyl dipeptide-1 cetyl ester enhances skin comfort and relaxation by modulating the perception of unpleasant sensations and promoting the production of elastic fibre components. It helps prevent the first wrinkles and gradually reduces the frequency of muscle contractions (which trigger the appearance of mimic wrinkles).

As a peptide that occurs naturally in the body, this peptide promotes the natural release of signalling agents that trigger feelings of well-being and pleasure. Improves the skin's tolerance to internal and external aggressions, relieves the skin tension that leads to the formation of expression lines and wrinkles, and reduces the perception of negative sensations in stressed, sensitive, irritated, dry or itchy skin.
