

CAS 158861-67-7 GH Peptide GHRP-2 For Loss Fat

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-GHRP2
- Minimum Order Quantity: 5 box
- Price: US\$ 45-50/ box
- Packaging Details: 10mg/vial, 10vials/Box
- Delivery Time: 3~5 days, upon receipt of payment
- Payment Terms: T/T, Western Union,
- Supply Ability: 5000 boxes per month

Product Specification

- Product Name: GHRP2
- CAS No: 158861-67-7
- MF: C₄₆H₅₆N₁₂O₆
- MW: 817.9
- Shelf Life: 2 Years
- Appearance: White Lyophilized Powder
- MOQ: 5 Box
- Highlight: **Loss Fat Human Growth Hormone Peptide, 158861-67-7 GHRP-2 Peptide**

Product Description

CAS 158861-67-7 GH Peptide GHRP-2 For Loss Fat

Product Details Of GHRP 2 :

Product Name	GHRP 2
Appearance	White powder
Specification	10mg/vial, 10vials/Box
Purity	99.6%
CAS	158861-67-7
MF	C ₄₆ H ₅₆ N ₁₂ O ₆
Storage	2~8 centigrade

What Is GHRP 2

GHRP-2 and Ipamorelin are all very similar in their modes of action, they work to increase GHRP-2 (GH) levels in the human body by increasing secretion of the hormone Ghrelin. On a milligram for milligram basis they are all fairly equal in their ability to increase GH levels in the human body, with GHRP-2 being slightly more efficient.

The major differences between the 3 GHRP peptides lays in their side effects. GHRP-6 causes a significant increase in hunger for many, therefore making it good for people looking to "bulk" but no so good for those trying to lose fat. GHRP-2 is often preferred for people dieting as it does not stimulate hunger, however it does raise cortisol (a stress hormone), prolactin (a hormone which can diminish sex drive) and aldosterone (a hormone which promotes water retention) more than GHRP-6 and Ipamorelin. Ipamorelin is similar to GHRP-6 in that it causes an increase in hunger (but it's not as dramatic as GHRP-6). However, since it does not raise cortisol, prolactin or aldosterone at recommended dosages it is a preferred choice for those who are sensitive to these hormones.

Applications Of GHRP 2

1. The half-life of GHRP-2 is quite short, though, with its peak occurring around 15 minutes after its administration or an hour later at the latest. Ideally, this therapy should be administered periodically everyday.
2. Similar to GHRP-6, GHRP-2 is its commercially synthesized form that can stimulate the secretion much better and stimulate the PRL, cortisol and ACTH levels a little better. For ghrelin, on the other hand, it functions like a synthetic agonist that can connect with the secretagogue receptor of the . GHRP-2 can also increase the levels of calcium ion influx and, in turn, release even more growth hormones.
3. Aside from that, some research has already been done proving how similar it is with the effectiveness of GRF, as well. As a matter of fact, it has proven to be much more potent compared to any other GH-releasing secretors known in the past, including GHRP-1 and GHRP-6. Because of this, this hormone is often used as a treatment for catabolic deficiencies and states nowadays.
4. GHRP-2 basically acts exactly like ghrelin. It can induce food consumption just like ghrelin and stimulate GH secretion, too. When infused, GHRP-2 makes the GH levels in the body increase a lot and it can induce cell cAMP secretion the way that GRF tends to, as well.
5. Aside from that, the supplements of GHRP-2 are known to be anti-inflammatory. However, its results tend to differ between research test subjects, depending on how each subject's pituitary somatotrophs choose to respond based on the different receptor subtypes of GHRP overall.

Feedback Of GHRP 2
