Description Of GHRP 2

GHRP-2 (Growth Hormone Releasing Hexapeptide) is a synthetic ghrelin analogue. Similar to ghrelin, it stimulates the release of endogenous growth hormone in the anterior pituitary. GHRP-2 is extremely synergistic with endogenous GHRH (Growth Hormone releasing-hormone) including synthetic GHRH analogues such as Modified GRF (1-29).

When GHRP-2 is used in conjunction with a GHRH such as Modified GRF (1-29) the GH pulse is amplified, potentially being 3 times stronger than GHRP-2 alone.

Benefits Of GHRP 2

The benefits of GHRP-6 are extremely appealing to many types of athletes, and those looking to improve their general well being.

GHRP-6 can help protect the body's muscles by boosting recovery and protein synthesis. What's more, it has also been shown to effectively fight inflammation.

Of course, we all want more muscle, and this compound will help increase muscle mass and development.

This is probably the reason people pony up the cash for GHRP-6, and it works great at aiding fat loss, which makes it a very good option for recomping or cutting.

The benefits of GHRP-6 are much more pronounced in those who are already in shape and conditioned. Therefore, if you are obese, or completely out of shape, then it is best to work on your conditioning first before using GHRP-6. Meanwhile, those that are in top shape, will benefit the most from this compound, as it is the icing on the cake.
