

Pharmaceutical Intermediates Hgh Frag Injectable Peptide Weight Loss

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-HGH Frag176-191
- Minimum Order Quantity: 5 boxes
- Price: US\$ 113-128/ box
- Packaging Details: 10mg/vial, 10vials/box
- Delivery Time: 3-5 work days after your payment
- Payment Terms: , Western Union, T/T
- Supply Ability: 4000kg/Month

Product Specification

- Name: Hgh Frag
- CAS: 863288-34
- Specification: 10mg/vial, 10vials/box; 2mg/vial, 10vials/box; 5mg/vial, 10vials/box
- MF: C78H123N23O23S2
- Appearance: White powder
- Assay: HPLC 99%
- Highlight: **Hgh Frag Injectable Peptide, Weight Loss Hgh Frag Peptide, Human Growth Injectable Peptide**

Product Description

What is pharmaceutical intermediate injectable peptide hgh frag weight loss?

Basic Information Form:

Product Name	hgh frag
Cas No.	863288-34
Assay	99%
Appearance	White powder
MF	C78H123N23O23S2
Shelf Life	2 years
Condition	2-8

Brief Introduction of Hgh Frag

Fragment (176/191) is a fat loss peptide derived from the GH molecule, which directly initiates lipolysis and inhibits lipogenesis, but in order to better understand this peptide, it is imperative to have at least a rudimentary understanding of its parent hormone.

GH is a polypeptide which contains an amino acid sequence that is 191 amino acids in length. Frag (176/191) was developed by isolating and modifying the specific portion of the GH molecule responsible for the hormone's lipolytic and anti-lipogenic effects.

The portion of the molecule responsible for these effects is amino acids 176/191. In every sense, Frag should primarily be considered a fat loss peptide which performs these functions through the same pathways as traditional GH, but without exposing the user to the potentially undesirable side effects which may present themselves during GH administration.

Function & Usage of Hgh Frag

The GH fragment 176-191 stimulates lipolysis and inhibits lipogenesis both en vivo/en vitro.

Fragment 176/191 has shown no effect on growth or resistance, unlike the full GH molecule. This is the newest, most powerful GH fragment on the market. Studies have shown sustained fat loss, aimed directly at adipose tissue.

It has been shown that the fat-reducing effects of GH appear to be controlled by a small analog region of the C-terminus end of the GH molecule. This region consists of amino acids 176/191, thus the name. This peptide fragment works by mimicking the way natural hGH regulates fat metabolism but without the adverse effects on blood sugar that is seen with unmodified hGH.

Feedback of Hgh Frag
