

99% Purity 10Mg/Vial GHRP 2 Peptide For Increasing Muscle Mass

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: COA, HPLC MR
- Model Number: HBY-GHRP2
- Minimum Order Quantity: 5 box
- Price: US\$ 43-52 / box
- Packaging Details: 10mg/vial, 10vials/Box
- Delivery Time: 3~5 days, upon receipt of payment
- Payment Terms: T/T, Western Union,
- Supply Ability: 5000 boxes per month

Product Specification

- Product Name: GHRP 2 Peptide
- CAS No: 158861-67-7
- Molecular Weight: 746.897
- Molecular Formula: C42H50N8O5
- Storage: 2~8 Centigrade
- Appearance: White Powder
- MOQ: 5 Box
- Shelf Life: 2 Years, When Proper Storage
- Highlight: **99% GHRP 2 Peptide,
GHRP 2 Human Growth Peptides,
158861-67-7 Ghrp 2 Peptide**

Product Description

99% Purity 10Mg/Vial GHRP 2 Peptide For Increasing Muscle Mass

Product Details Of GHRP 2 Peptide :

Product Name	GHRP 2 Peptide
Appearance	White powder
CAS	87616-84-0
Specification	10mg/vial, 10vials/Box
Purity	99%
Test	HPLC
Molecular Formula	C46H56N12O6
Molecular Weight	746.897

What Is GHRP 2 Peptide?

Growth Hormone Releasing Peptide-2 (GHRP-2), also known as Pralmorelin, is a synthetically made growth hormone secretagogue, a peptide that stimulates the body to increase natural production of growth hormone. GHRP-2 is an agonist of ghrelin, a gut peptide and also known as "the hunger hormone", which binds to the growth hormone secretagogue receptor. Ghrelin has been shown to stimulate growth hormone secretion and appetite initiation.

GHRP-2 works to enhance natural growth hormone production in two ways. First, the GHRP-2 intensifies the natural growth hormone releasing signal, resulting in a substantial secretion of growth hormone. Second, it suppresses a hormone in the body called somatostatin, also known as growth hormone inhibiting hormone (GHIH). Somatostatin generates the body to decrease its natural growth hormone production. By restricting the activity of somatostatin, GHRP-2 can improve growth hormone creation, resulting in increased natural growth hormone levels. GHRP-2 also activates ghrelin, a peptide hormone produced in the gastrointestinal system, which has strong effects on growth hormone production and appetite.

As GHRP-2 stimulates the body to create growth hormone, there is no shutdown of natural growth hormone production as occurs with synthetic GH administration. GHRP-2 causes growth hormone secretion in a manner that firmly resembles natural release patterns, instead of being continually raised. This method prevents many of the negative side effects of synthetic GH administration, including the shutdown of natural growth hormone production.

Benefits Of GHRP 2 Peptide:

Growth hormone-releasing peptide-2 is a natural, affordable, and effective treatment that can help you enjoy long-lasting health and vitality. There are many reasons to try growth hormone therapy. Some of the most important benefits include:

1. Increased muscle mass
2. Decreased body fat
3. Better flexibility
4. Improved joint health

It can also help injuries heal faster-than-usual and help improve your body by accelerating muscle tissue growth. In some cases, it boosts your mood and memory, improves skin tone, and even eliminates cellulite. If you find that your health is eroding, your energy is diminishing, and you are feeling older than you'd like, this therapy may finally be the solution.

Skincare Benefits

Not only can this therapy help you feel more robust, but it will also help you look great. Low GH levels are also correlated with unsightly skin conditions such as wrinkles and sagging skin.

Feedback Of GHRP 2 Peptide :
