

Synthetic Version TB 500 Thymosin B4 White Lyophilized Powder For Sale

Basic Information

Place of Origin: China
Brand Name: Hongbaiyi
Certification: COA, HPLC MR
Model Number: HBY-TB 500 Peptide

• Minimum Order Quantity: 5 boxes

Price: US \$ 65-69/ Box
Packaging Details: 5mg/vial, 10vials/Box

Delivery Time: 3~5 days, upon recepient of payment
 Payment Terms: T/T, Western Union, MoneyGram

Supply Ability: 5000 boxes per month

Product Specification

Product Name: TB 500 Peptide
 CAS No: 77591-33-4
 Molecular Weight: 4963.44

Molecular Formula: C212H350N56O78SAppearance: White Lyophilized Powder

• Storage: Keep In Dark Place, Inert Atmosphere, Store

In Freez

MOQ: 5 Boxes

• Highlight: Intramuscular Injection TB 500 Peptide,

Thymosin B4 Lyophilized Powder, Synthetic Thymosin B4 Peptide

Product Description

Synthetic Version Tb 500 Thymosin B4 White Lyophilized Powder For Sale

Product Details of Tb500 Peptide:

Product Name	Synthetic Version Tb 500 Thymosin B4
Appearance	White powder
Specification	5mg/vial, 10vials/Box
Assay	99.2%
Test	HPLC
CAS	77591-33-4
MF	C212H350N56O78S
Storage	Keep in Dark Place

What Is Tb 500 Thymosin B4?

TB500 or Thymosin B4 is a synthetic version of the active region of thymosin β 4. TB500 is purported to promote endothelial cell differentiation, angiogenesis in dermal tissue, keratinocyte migration, collagen deposition, and reduction of inflammation.

If you are an injured athlete, you can speed up the recovery process.

TB-500 or Thymosin B4 is a sterile white lyophilized powder that is dissolved in sterile water and used for subcutaneous or intramuscular injection.

TB-500 or Thymosin B4 is a short peptide segment or fragment of the naturally-occurring thymosin beta-4 hormone (TB-4.) To be clear, TB-500 most emphatically is not TB-4, although it's often sold under that name. TB-4 itself is as yet an extremely pricey, rare research material that is not yet available for bodybuilding or equine enhancement.

In the body, Thymosin B4 TB-4 is produced in the thymus, a gland that is at its largest in children, atrophies as adulthood progresses, and is virtually non-existent in the elderly. It is also produced locally in various cells and is particularly found in wound fluids, as well as in fairly high concentrations in the cytoplasm of some cells. In various studies, TB-4 has been found able to promote various forms of wound healing, to promote differentiation of stem cells, and reduce inflammation.

Protein hormones such as TB-4 do not bind in their entirety to a receptor site, as they are too large to fit. Instead, an active region of the protein fits into receptor sites.

The TB-500 or Thymosin B4 peptide sequence is identical to the active region area of Thymosin B4 TB-4 and shares many and possibly all of the properties of TB-4, in a form that is more economical to produce.

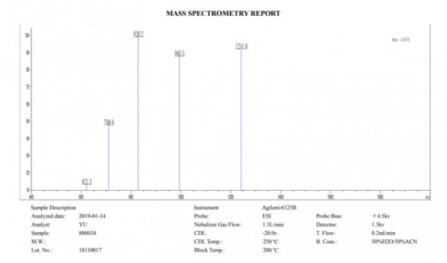

Application Of TB 500 Peptide:

The primary action of TB500 or Thymosin B4 is to promote wound healing. It also promotes the production of new blood and muscle cells.TB-500 has a healing effect on tendons, ligaments, muscles, skin, the heart, and eyes. Thymosin beta-4 is produced naturally in high concentrations in areas of tissue damage.

Designed to help injured athletes and bodybuilders, TB-500 or Thymosin B4 is an injectable peptide medication that can be used to promote wound healing, improve range of motion in the event of an injury, or reduce pain in the event of an injury by being anti-inflammatory. This peptide is also a very effective anti-inflammatory agent.

TB500 or Thymosin B4 is a synthetic peptide that is directly related to rehabilitation as it plays an important role in the construction of new blood vessels, new small muscle tissue fibers, cell migration, and blood cell reproduction. If you are an injured athlete, all of these properties are much needed as you seek to speed up the recovery process.
