

Hplc Cosmetic Acetyl Hexapeptide-38 Peptide Mw 700.83 For Breast Firming

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: HPLC
- Model Number: HBY-Acetyl Hexapeptide-38
- Minimum Order Quantity: 1-500g
- Price: Negotiable
- Packaging Details: 1-500g /plastic bottle
- Delivery Time: 3~5 days, upon receipt of payment
- Payment Terms: T/T, Western Union, MoneyGram
- Supply Ability: 5000g per month

Acetyl Hexapeptide-38

Product Specification

- INCI Name: VAcetyl Hexapeptide-38 Peptide
- Gas No.: N/A
- Acetic Acid Content: $\leq 15.0\%$
- Recommended Use Level: 100-1000PPM
- Storage: Keep In Dark And Cool Dry Place (-5 To 8°C)
- Appearance: White To Off-white Powder
- Odor: Slightly Characteristic Odor
- Theoretical MW: 700.83
- Purity (HPLC): $\geq 95.0\%$
- Applications: Breast Firming/ Facial Redefining
- Highlight: **Cosmetic Acetyl Hexapeptide-38 Peptide , Breast Firming Acetyl Hexapeptide-38**

Product Description

Hplc Cosmetic Acetyl Hexapeptide-38 Peptide Mw 700.83 For Breast Firming

Basic Information of Acetyl Hexapeptide-38 Peptide:

INCI Name	Acetyl Hexapeptide-38
Cas No.	N/A
Recommended use level	100-1000PPM
Appearance	White to off-white powder
Purity (HPLC)	≥95.0%
Applications	Breast firming/ Facial redefining
MOQ	1g
Storage	-5 to 8°C

What is Acetyl Hexapeptide-38 Peptide For Breast firming/ Facial redefining?

Acetyl Hexapeptide-38 is a synthetic peptide that is used in skincare products to promote breast firming and facial redefining. It works by increasing the production of adipocytes, which are the cells that store fat. This can help to plump up the breasts and reduce the appearance of wrinkles and fine lines on the face.

Acetyl Hexapeptide-38 is also thought to help stimulate collagen production. Collagen is a protein that helps to keep the skin firm and youthful. By increasing collagen production, Acetyl Hexapeptide-38 can help to improve the overall texture of the skin and reduce the appearance of wrinkles and fine lines.

Acetyl Hexapeptide-38 is generally considered to be safe for most skin types, but it is important to do a patch test on a small area of skin before using any new product, especially if you have sensitive skin.

Acetyl Hexapeptide-38 can be found in a variety of skincare products, including serums, moisturizers, and creams. It is often used in combination with other anti-aging ingredients, such as retinol, hyaluronic acid, and vitamin C.

How does Acetyl Hexapeptide-38 Peptide work?

Acetyl Hexapeptide-38 is a synthetic peptide that works by increasing the production of adipocytes, which are the cells that store fat. It also stimulates collagen production.

Breast firming: Acetyl Hexapeptide-38 can help to plump up the breasts by increasing the production of adipocytes. This can make the breasts appear larger and firmer.

Facial redefining: Acetyl Hexapeptide-38 can help to improve the contour of the face by plumping up the cheeks and temples. It can also help to reduce the appearance of wrinkles and fine lines around the eyes and mouth.

Collagen production: Collagen is a protein that helps to keep the skin firm and youthful. By stimulating collagen production, Acetyl Hexapeptide-38 can help to improve the overall texture of the skin and reduce the appearance of wrinkles and fine lines.

Acetyl Hexapeptide-38 is still a relatively new ingredient in skincare products, but there is some research to support its use for breast firming and facial redefining. For example, one study found that Acetyl Hexapeptide-38 was effective in increasing breast volume and reducing the appearance of wrinkles on the face.

Overall, Acetyl Hexapeptide-38 is a promising ingredient for breast firming and facial redefining. It is generally safe for most skin types and can be found in a variety of skincare products. However, more research is needed to confirm its long-term effectiveness and safety.

Applications of Acetyl Hexapeptide-38

Here are some of the applications of Acetyl Hexapeptide-38:

Breast firming: Acetyl Hexapeptide-38 can help to plump up the breasts by increasing the production of adipocytes. This can make the breasts appear larger and firmer.

Facial redefining: Acetyl Hexapeptide-38 can help to improve the contour of the face by plumping up the cheeks and temples. It can also help to reduce the appearance of wrinkles and fine lines around the eyes and mouth.

Anti-aging: Acetyl Hexapeptide-38 can help to improve the overall texture of the skin and reduce the appearance of wrinkles and fine lines by stimulating collagen production.

Acetyl Hexapeptide-38 is generally considered to be safe for most skin types, but it is important to do a patch test on a small area of skin before using any new product, especially if you have sensitive skin.

Acetyl Hexapeptide-38 can be found in a variety of skincare products, including serums, moisturizers, and creams. It is often used in combination with other anti-aging ingredients, such as retinol, hyaluronic acid, and vitamin C.

It is important to note that there is no scientific evidence to support the claim that Acetyl Hexapeptide-38 can actually increase breast size. However, it can help to plump up the breasts by increasing the production of adipocytes. Additionally, Acetyl Hexapeptide-38 can help to improve the overall appearance of the breasts by reducing the appearance of wrinkles and fine lines.

For facial redefining, Acetyl Hexapeptide-38 can help to improve the contour of the face by plumping up the cheeks and temples. It can also help to reduce the appearance of wrinkles and fine lines around the eyes and mouth.

Overall, Acetyl Hexapeptide-38 is a promising ingredient for breast firming, facial redefining, and anti-aging. It is generally safe for most skin types and can be found in a variety of skincare products. However, it is important to note that there is no scientific evidence to support the claim that Acetyl Hexapeptide-38 can actually increase breast size.
