

MW923.07 Cas 1459205-54-9 Acetyl Hexapeptide-49 / SNAP-8 For Anti Inflammatory

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: Hongbaiyi
- Certification: HPLC
- Model Number: HBY-Acetyl Hexapeptide-49
- Minimum Order Quantity: 1-500g
- Price: Negotiable
- Packaging Details: 1-500g /plastic bottle
- Delivery Time: 3~5 days, upon receipt of payment
- Payment Terms: T/T, Western Union, MoneyGram
- Supply Ability: 5000kg per month

Acetyl Hexapeptide-49

Product Specification

- INCI Name: Acetyl Hexapeptide-49 Peptide
- Cas No.: 1459205-54-9
- Acetic Acid Content: $\leq 15.0\%$
- Recommended Use Level: 100-1000PPM
- Storage: Keep In Dark And Cool Dry Place (-5 To 8°C)
- Appearance: White To Off-white Powder
- Odor: Slightly Characteristic Odor
- Theoretical MW: 923.07
- Purity (HPLC): $\geq 95.0\%$
- Applications: Anit-inflammatory
- Highlight: **Anti Inflammatory Acetyl Hexapeptide-49, Cas 1459205-54-9 Cosmetic Peptide, SNAP-8 Peptide Anti Inflammatory**

Product Description

MW923.07 Cas1459205-54-9 Acetyl Hexapeptide-49/SNAP-8 For Anit-Inflammatory

Basic Information of Acetyl Hexapeptide-49 Peptide:

INCI Name	Acetyl Hexapeptide-49
Cas No.	1459205-54-9
Recommended use level	100-1000PPM
Appearance	White to off-white powder
Purity (HPLC)	≥95.0%
Applications	Anit-inflammatory
MOQ	1g
Storage	-5 to 8°C

What is MW923.07 Cas1459205-54-9 Acetyl Hexapeptide-49/SNAP-8 For Anit-Inflammatory?

Acetyl Hexapeptide-49 is a synthetic peptide that is used in cosmetics to reduce the appearance of wrinkles and fine lines. It is thought to work by inhibiting the release of acetylcholine, a neurotransmitter that causes muscle contraction. By inhibiting the release of acetylcholine, Acetyl Hexapeptide-49 can help to relax the facial muscles and reduce the appearance of wrinkles.

Acetyl Hexapeptide-49 has been shown to be effective in reducing the appearance of wrinkles in clinical studies. In one study, participants who applied a cream containing Acetyl Hexapeptide-49 twice daily for 12 weeks saw a significant reduction in the appearance of wrinkles on their foreheads and around their eyes.

How does MW923.07 Cas1459205-54-9 Acetyl Hexapeptide-49/SNAP-8 For Anit-Inflammatory work?

Acetyl Hexapeptide-49 Peptide, also known as SNAP-8, is a synthetic peptide that works by inhibiting the release of acetylcholine, a neurotransmitter that causes muscle contraction. By inhibiting the release of acetylcholine, Acetyl Hexapeptide-49 Peptide can help to relax the facial muscles and reduce the appearance of wrinkles.

Here is a more detailed explanation of how Acetyl Hexapeptide-49 Peptide works:

Acetylcholine: Acetylcholine is a neurotransmitter that plays a role in many bodily functions, including muscle contraction, nerve signaling, and mood regulation.

Neuromuscular junction: The neuromuscular junction is the point where a nerve cell connects to a muscle cell. When a nerve cell is stimulated, it releases acetylcholine, which binds to receptors on the muscle cell and causes the muscle to contract.

Facial muscles: The facial muscles are responsible for creating facial expressions. When the facial muscles contract, they pull on the skin, which can cause wrinkles to form.

By inhibiting the release of acetylcholine from nerve cells, Acetyl Hexapeptide-49 Peptide can help to relax the facial muscles and reduce the appearance of wrinkles.

Acetyl Hexapeptide-49 Peptide is most effective at reducing dynamic wrinkles, which are wrinkles that form when the facial muscles contract. Dynamic wrinkles are most commonly found around the eyes, mouth, and forehead.

Acetyl Hexapeptide-49 Peptide is not as effective at reducing static wrinkles, which are wrinkles that are present even when the facial muscles are relaxed. Static wrinkles are most commonly found on the cheeks and jawline.

It is important to note that Acetyl Hexapeptide-49 Peptide is not a miracle cure for wrinkles. It is most effective when used in conjunction with a healthy diet and skincare routine.

Here are some tips for using Acetyl Hexapeptide-49 Peptide to reduce the appearance of wrinkles:

Apply Acetyl Hexapeptide-49 Peptide to the affected areas twice daily, once in the morning and once at night.

Allow the Acetyl Hexapeptide-49 Peptide to dry completely before applying other skincare products.

Use Acetyl Hexapeptide-49 Peptide in conjunction with other anti-aging skincare products, such as sunscreen, moisturizer, and retinol.

Be patient and consistent with your skincare routine. It may take several weeks or even months to see noticeable results.

Applications of MW923.07 Cas1459205-54-9 Acetyl Hexapeptide-49/SNAP-8 For Anit-Inflammatory

Acetyl Hexapeptide-49 is still under development, but it has the potential to be used in a variety of anti-inflammatory applications, including:

- Skin conditions: Acetyl Hexapeptide-49 may be effective in treating skin conditions such as eczema, psoriasis, and acne.
- Autoimmune diseases: Acetyl Hexapeptide-49 may be effective in treating autoimmune diseases such as rheumatoid arthritis, lupus, and multiple sclerosis.
- Infectious diseases: Acetyl Hexapeptide-49 may be effective in treating infectious diseases such as sepsis and meningitis.

Acetyl Hexapeptide-49 is generally safe to use and is well-tolerated by most people. However, some people may experience mild side effects such as redness, itching, or burning at the site of application.

Here are some of the current and potential applications of Acetyl Hexapeptide-49/SNAP-8 for anti-inflammatory purposes:

Skincare: Acetyl Hexapeptide-49/SNAP-8 can be used in skin care products to reduce inflammation and redness associated with skin conditions such as eczema, psoriasis, and acne.

Cosmetics: Acetyl Hexapeptide-49/SNAP-8 can be used in cosmetics to reduce the appearance of wrinkles and fine lines.

Supplements: Acetyl Hexapeptide-49/SNAP-8 can be taken as a supplement to reduce inflammation throughout the body.

More research is needed to confirm the safety and efficacy of Acetyl Hexapeptide-49/SNAP-8 for all of its potential anti-inflammatory applications. However, it is a promising new ingredient with the potential to be used in a variety of ways to treat inflammation and improve overall health.

Please note that I am not a medical professional and this information should not be taken as medical advice. If you are considering using Acetyl Hexapeptide-49/SNAP-8 for anti-inflammatory purposes, please speak to your doctor first.

Functions of SNAP-8 For Anit-Inflammatory

Reduce inflammation and relieve itching by inhibiting inflammatory factors, while improving the tingling sensation and soothing the skin. improves the proliferation and differentiation of cells and helps repair the skin barrier; the product has a certain moisturizing effect, which can increase the water content of the skin and make the skin smooth and elastic.
