## Product Description

Ovagen is a tripeptide bioregulator that should not be confused with the similarly named Ovagen that contains ovine (sheep) follicle stimulating hormone (FSH). The two products are not the same and have entirely different functions. While the FSH derivative promotes ovulation, particularly in women suffering from conditions like polycystic ovarian syndrome (PCOS), the tripeptide is a liver function regulator. Throughout this article, Ovagen will refer to the tripeptide bioregulator.
