Product Description

Cartalax is a short biological regulatory peptide that has broad systemic effects due to its impact on fibroblasts. It has been proven to be beneficial for the skin, other connective tissues, and kidneys. Research has shown that Cartalax can increase cell proliferation rates and beneficially alter the levels of various cytokines and signaling molecules associated with aging. Overall, it increases cell health and proliferation while reducing cell death. Cartalax is considered an anti-aging peptide that restores aged cells to a younger state and prolongs overall tissue health.
