Product Description

overview

Tirzepatide is listed in the catalog as a research material, available in 10 mg, 20 mg, and 30 mg specifications.

"Tirzepatide" is a catalog alias rather than the name of a specific chemical entity. Tirzepatide is a modified GIP-derived peptide and a dual GIP/GLP-1 receptor agonist; GLP-2 is a separate endogenous hormone composed of 33 amino acid residues. Upon registration, the complete modified structure and the specific batch form must be confirmed.

Benefits include:

- Enhanced weight reduction and fat-burning support
- Noticeably reduced appetite and cravings
- Improved blood sugar regulation
- Longer-lasting fullness and portion control
- Balanced energy and metabolic efficiency
