Product Description

Teriparatide (PTH 1-34) – High-Purity Research Peptide

Teriparatide is a recombinant peptide consisting of the first 34 amino acids of human parathyroid hormone (PTH 1-34). It is a potent PTH1 receptor agonist that stimulates osteoblast activity and promotes bone formation, making it a widely used tool in bone metabolism and osteoporosis-related research.

Unlike antiresorptive agents, Teriparatide acts as an **anabolic** agent, increasing bone mineral density through intermittent activation of the PTH1 receptor and subsequent elevation of cAMP/PKA signaling pathways.
